L. Rodman

Matrices and Indefinite Scalar Products

1983

Birkhäuser Verlag
Basel · Boston · Stuttgart

TABLE OF CONTENTS

INTRODUCTION 1

PART I. BASIC THEORY 9

CHAPTER 1. INDEFINITE SCALAR PRODUCTS

1.1 Definition 10
1.2 Orthogonality and orthogonal bases 12
1.3 Classification of subspaces 15

CHAPTER 2. CLASSES OF LINEAR TRANSFORMATIONS

2.1 Adjoint matrices 19
2.2 H-selfadjoint matrices; examples and simplest properties 22
2.3 H-unitary matrices; examples and simplest properties 25
2.4 A second characterization of H-unitary matrices 29

CHAPTER 3. CANONICAL FORMS OF H-SELFADJOINT MATRICES

3.1 Unitary similarity 31
3.2 Description of a canonical form 33
3.3 First applications of the canonical form 35
3.4 Proof of Theorem 3.3 37
3.5 Classification of matrices by unitary similarity 43
3.6 Signature matrices 47
3.7 The structure of H-selfadjoint matrices when H has a small number of negative eigenvalues 52

3.8	H-definite matrices	54
3.9	Second description of the sign characteristic	55
3.10	Canonical forms for pairs of hermitian matrices	57
3.11	Third description of the sign characteristic	59
3.12	Maximal nonnegative invariant subspaces	61
3.13	Inverse problems	68

CHAPTER 4. CANONICAL FORMS FOR H-UNITARY MATRICES

4.1	First examples of canonical forms . . .	70
4.2	Canonical forms in the general case . . .	73
4.3	Correctness of the sign characteristic. .	79
4.4	First applications of the canonical form	82
4.5	Further deductions from the canonical form	83
4.6	H-normal matrices	84

CHAPTER 5. REAL MATRICES

5.1	Real H-selfadjoint matrices and canonical forms	87
5.2	Proof of Theorem 5.3	91
5.3	Comparison with results in the complex case	95
5.4	Connected components of real unitary similarity classes	96
5.5	Connected components of real unitary similarity classes (H fixed)	102

CHAPTER 6. FUNCTIONS OF H-SELFADJOINT AND H-UNITARY MATRICES

6.1	Preliminaries	106
6.2	Exponential and logarithmic functions . .	108

6.3 Functions of H-selfadjoint matrices . . . 110
6.4 Functions of H-unitary matrices 114
6.5 The canonical form and sign characteristic for a function of an H-selfadjoint matrix 115
6.6 Functions of H-selfadjoint matrices which are selfadjoint in another indefinite scalar product 119

NOTES TO PART I 121

PART II. FIRST APPLICATIONS 123

CHAPTER 1. HAMILTONIAN AND SELFADJOINT DIFFERENTIAL EQUATIONS WITH PERIODIC COEFFICIENTS

1.1 The matrizant 126
1.2 The monodromy matrix 131
1.3 The Floquet theorem 133
1.4 The real case 134
1.5 Proof of Theorem 1.7 136
1.6 Selfadjoint equations with periodic coefficients 138
1.7 The real case for selfadjoint equations 144
1.8 Boundedness of solutions of self-adjoint equations 145

CHAPTER 2. HERMITIAN MATRIX POLYNOMIALS

2.1 Preliminaries 149
2.2 Matrix polynomials with hermitian coefficients 152
2.3 Factorization of hermitian matrix polynomials 156
2.4 Difference equations and hermitian matrix polynomials on the unit circle . . 160

CHAPTER 3. HERMITIAN RATIONAL MATRIX FUNCTIONS

3.1 Minimal nodes 166
3.2 The sign characteristic: definition and main result 168
3.3 Null functions and Jordan chains 171
3.4 Proof of Theorem 3.4 174
3.5 Factorization of hermitian rational matrix functions 177
3.6 Symmetric factorizations of hermitian rational matrix functions 179
3.7 Nonnegative definite rational matrix functions 183
3.8 Minimal factorizations of real hermitian rational matrix functions . . . 186

APPENDIX TO CHAPTER 3. RATIONAL MATRIX FUNCTIONS

A.1 Linear systems, their transfer functions and nodes 188
A.2 The local Smith form and partial multiplicities 193
A.3 Minimal factorizations 195
A.4 Minimal factorizations of real rational functions 199

CHAPTER 4. THE ALGEBRAIC RICCATI EQUATION

4.1 An optimal control problem 202
4.2 General solutions of the Riccati equation 203
4.3 Existence of hermitian solutions of the Riccati equation 208
4.4 Hermitian solutions and nonnegative rational functions 214
4.5 Description of hermitian solutions 217
4.6 Extremal hermitian solutions 219
4.7 Real symmetric solutions of the algebraic Riccati equation with real coefficients 223

NOTES TO PART II 226

PART III. PERTURBATIONS AND STABILITY 227

CHAPTER 1. GENERAL PERTURBATIONS. STABILITY OF DIAGONABLE MATRICES

1.1 General perturbations of H-selfadjoint matrices 229
1.2 Stably diagonable H-selfadjoint matrices 232
1.3 General perturbations and stably diagonable H-unitary matrices 235
1.4 Analytic perturbations and eigenvalues . . 236
1.5 Analytic perturbations and eigenvectors 241
1.6 The real case 243
1.7 The real skew-symmetric case 244
1.8 Auxiliary results for the real skew-symmetric case 246
1.9 Proof of Theorem 1.10 248

CHAPTER 2. APPLICATIONS TO DIFFERENTIAL AND DIFFERENCE EQUATIONS

2.1 Differential equations of first order . . 251
2.2 Differential equations of higher order . . 252
2.3 The strongly hyperbolic case 255
2.4 Difference equations 257
2.5 Hamiltonian and selfadjoint equations . . 260

CHAPTER 3. POSITIVE PERTURBATIONS

3.1 Positive perturbations of H-selfadjoint matrices 262
3.2 Hamiltonian systems of positive type with constant coefficients 265

CHAPTER 4. PERTURBATIONS OF INVARIANT MAXIMAL NEUTRAL SUBSPACES

4.1 Continuity of invariant maximal neutral subspaces 268
4.2 Analyticity of invariant maximal neutral subspaces 270
4.3 Extremal solutions of the algebraic Riccati equation 273
4.4 Application to the optimal control problem 275
4.5 Continuity of canonical factorization of nonnegative rational matrix functions 278

CHAPTER 5. PERTURBATIONS WHICH PRESERVE JORDAN STRUCTURE

5.1 Stability of the sign characteristic . . . 282
5.2 Stability of unitary similarity 287
5.3 Special cases of unitary similarity . . . 289
5.4 Continuous dependence of the canonical form 291
5.5 Analytic dependence of the canonical form 297
5.6 H-unitary matrices 298
5.7 Connected components of selfadjoint matrices with like real Jordan structure 299
5.8 The real case 303

APPENDIX TO PART III. SUBSPACES IN FINITE DIMENSIONAL COMPLEX SPACE

A.1 The metric space of subspaces 306
A.2 Continuous families of subspaces 311
A.3 Analytic families of subspaces 315

NOTES TO PART III 318

PART IV. CONNECTED COMPONENTS OF DIFFERENTIAL EQUATIONS . 319

CHAPTER 1. CONNECTED COMPONENTS OF STABLY DIAGONABLE MATRICES

1.1 H-selfadjoint stably r-diagonable matrices 320

1.2 H-unitary stably u-diagonable matrices . . 323

1.3 E-orthogonal stably u-diagonable matrices 326

CHAPTER 2. DIFFERENTIAL AND DIFFERENCE EQUATIONS WITH CONSTANT COEFFICIENTS

2.1 Connected components of differential equations with hermitian coefficients and stably bounded solutions 329

2.2 A special case 331

2.3 Connected components of difference equations 334

CHAPTER 3. CONNECTED COMPONENTS OF HAMILTONIAN EQUATIONS

3.1 Definition and explanation of the problem 338

3.2 Group of H-unitary matrices 340

3.3 Simple connectedness of unitary similarity classes 343

3.4 Homotopy in connected components of u-stably diagonable matrices 347

3.5 Homotopy indices of H-unitary matrices 350

3.6 Connected components of hamiltonian systems with stably bounded solutions . . 354

3.7 Simple connectedness of connected components of real E-orthogonal matrices 356

3.8 Connected components of real hamiltonian systems with stably bounded solutions 360
