CONTENTS

Preface 17

PART I: STATISTICS AND DATA ANALYSIS 21

CHAPTER 1 Data and Business Decisions 23

Introduction 23

Statistical Thinking in Business 25
Six Sigma and Statistical Thinking 26

Data in the Business Environment 27
Metrics and Measurement 28
The Balanced Scorecard 28

Sources and Types of Data 30
Data Classification 32

Populations, Samples, and Statistics 34

Using Microsoft Excel 36
Basic Excel Skills 36
Copying Formulas and Cell References 37
Functions 38
Other Useful Excel Tips 41
Excel Add-Ins 41

Working with Data in Excel 42
PivotTables 42

Basic Concepts Review Questions 49

Skill-Building Exercises 49

Problems and Applications 49

Case: A Data Collection and Analysis Project 50

CHAPTER 2 Displaying and Summarizing Data 52

Introduction 53

Displaying Data with Charts and Graphs 53
Column and Bar Charts 53
Line Charts 56
Pie Charts 57
Area Charts 57
Scatter Diagrams 57
Miscellaneous Excel Charts 58
Summary of Graphical Display Methods 60

Descriptive Statistics: Concepts and Applications 61
Excel Descriptive Statistics Tool 63
Measures of Central Tendency 64
Measures of Dispersion 65
Frequency Distributions and Histograms 67

Measures of Shape 70
Data Profiles 72
Correlation 73

Visual Display of Statistical Measures 76
Box-and-Whisker Plots 76
Stem-and-Leaf Displays 77
Dot-Scale Diagrams 80

Descriptive Statistics for Categorical Data 81

Basic Concepts Review Questions 83

Skill-Building Exercises 84

Problems and Applications 84

Case: The Malcolm Baldrige National Quality Award 88

Appendix: Descriptive Statistics: Theory and Computation 90
Mean, Variance, and Standard Deviation 90
Statistical Measures for Grouped Data 90
Skewness and Kurtosis 91
Correlation 91

CHAPTER 3 Probability Distributions and Applications 93

Introduction 94

Probability: Concepts and Applications 94
Basic Probability Rules 95
Random Variables 97

Probability Distributions 97
Discrete Probability Distributions 99
Continuous Probability Distributions 100
Expected Value and Variance of a Random Variable 101

Common Probability Distributions 102
Bernoulli Distribution 103
Binomial Distribution 104
Poisson Distribution 105
Uniform Distribution 107
Normal Distribution 107
Triangular Distribution 112
Exponential Distribution 113
Other Useful Distributions 114
Probability Distributions in PHStat 117

Joint, Marginal, and Conditional Probability Distributions 118

Monte Carlo Methods in Statistics 119
Random Numbers 120
Random Sampling from Probability Distributions 121
Generating Random Variates in Excel 123
Applications of Monte Carlo Methods in Statistics 125

Sampling Distributions and Sampling Error 127
Standard Error of the Mean 130
Applying Sampling Distributions 131

Basic Concepts Review Questions 131

Skill-Building Exercises 132

Problems and Applications 132

Case: Probability Analysis for Quality Measurements 137

Appendix: Probability: Theory and Computation 138
Expected Value and Variance of a Random Variable 138
Binomial Distribution 138
Poisson Distribution 139
Uniform Distribution 139
Normal Distribution 139
Triangular Distribution 140
Exponential Distribution 140
Conditional Probability 140
Bayes's Theorem 141

CHAPTER 4 Sampling and Estimation 142

Introduction 143

Statistical Sampling 143
Sample Design 143
Sampling Methods 144
Errors in Sampling 147

Estimation 147
Point Estimates 148
Unbiased Estimators 149
Interval Estimates 150

Confidence Intervals: Concepts and Applications 150
Confidence Interval for the Mean with Known Population Standard Deviation 151
Confidence Interval for the Mean with Unknown Population Standard Deviation 154
Confidence Interval for a Proportion 156
Confidence Intervals for the Variance and Standard Deviation 156
Confidence Interval for a Population Total 159

Using Confidence Intervals for Decision Making 160

Confidence Intervals and Sample Size 161

Additional Types of Confidence Intervals 164

Basic Concepts Review Questions 165

Skill-Building Exercises 165

Problems and Applications 166

Case: Analyzing a Customer Survey 168

Appendix: Theory and Additional Topics 169
Theory Underlying Confidence Intervals 169
Sampling Distribution of the Proportion 170
Sample Size Determination 171
Additional Confidence Intervals 171

CHAPTER 5 Hypothesis Testing and Statistical Inference 174

Introduction 175

Basic Concepts of Hypothesis Testing 175
Hypothesis Formulation 176
Significance Level 177
Decision Rules 178
Spreadsheet Support for Hypothesis Testing 180

One-Sample Hypothesis Tests 181
One-Sample Tests for Means 181
Using p-Values 183

One-Sample Tests for Proportions 185
Type II Errors and the Power of a Test 187

Two-Sample Hypothesis Tests 190
Two-Sample Tests for Means 190
Two-Sample Test for Means with Paired Samples 192
Two-Sample Tests for Proportions 193
Hypothesis Tests and Confidence Intervals 194
Test for Equality of Variances 195

ANOVA: Testing Differences of Several Means 197
Assumptions of ANOVA 199
Tukey–Kramer Multiple Comparison Procedure 199

Chi-Square Test for Independence 201

Basic Concepts Review Questions 203

Skill-Building Exercises 204

Problems and Applications 204

Case: HATCO, Inc. 208

Appendix: Hypothesis-Testing Theory and Computation 208
Two-Sample Tests for Differences in Means 208
Two-Sample Test for Differences in Proportions 209
Test for Equality of Variances 209
Theory of Analysis of Variance 209

CHAPTER 6 Regression Analysis 210

Introduction 211

Simple Linear Regression 212
Least-Squares Regression 214
Coefficient of Determination 218
Application of Regression to Investment Risk 218

Interpreting Regression Analysis Output 221
Regression Statistics 221
Hypothesis Testing 222
Residual Analysis 222
Confidence and Prediction Intervals 224

Assumptions of Regression Analysis 224

Multiple Linear Regression 227
Interpreting Results from Multiple Linear Regression 228
Correlation and Multicollinearity 230

Building Good Regression Models 231
Stepwise Regression 234
Best-Subsets Regression 235
The Art of Model Building in Regression 236

Regression with Categorical Independent Variables 239
Categorical Variables with More Than Two Levels 242

Regression Models with Nonlinear Terms 245

Basic Concepts Review Questions 247

Skill-Building Exercises 247

Problems and Applications 248

Case: HATCO 251

Appendix: Regression Theory and Computation 252
Regression as Analysis of Variance 252
Standard Error of the Estimate 253
Adjusted R-Square 253
Confidence Intervals 253
Prediction Intervals 254

CHAPTER 7 Forecasting 255

Introduction 256

Qualitative and Judgmental Methods 257
Historical Analogy 257
The Delphi Method 258
Indicators and Indexes for Forecasting 258

Statistical Forecasting Models 259

Forecasting Models for Stationary Time Series 261
Moving Average Models 261
Error Metrics and Forecast Accuracy 264
Exponential Smoothing Models 266

Forecasting Models for Time Series with Trend and Seasonality 269
Models for Linear Trends 269
Models for Seasonality 269
Models for Trend and Seasonality 269

Choosing and Optimizing Forecasting Models Using *CB Predictor* 270

Regression Models for Forecasting 275
Autoregressive Forecasting Models 276
Incorporating Seasonality in Regression Models 278
Regression Forecasting with Causal Variables 280

The Practice of Forecasting 282

Basic Concepts Review Questions 284

Skill-Building Exercises 284

Problems and Applications 284

Case: Energy Forecasting 286

Appendix: Advanced Forecasting Models—
Theory and Computation 286
Double Moving Average 286
Double Exponential Smoothing 287
Additive Seasonality 287
Multiplicative Seasonality 287
Holt–Winters Additive Model 288
Holt–Winters Multiplicative Model 288

CHAPTER 8 Statistical Quality Control 289

Introduction 289

The Role of Statistics and Data Analysis in Quality Control 290

Statistical Process Control 291
Control Charts 292
$\bar{x}$- and R-Charts 293

Analyzing Control Charts 298
Sudden Shift in the Process Average 299
Cycles 299

Trends 299
Hugging the Center Line 300
Hugging the Control Limits 300
Control Charts for Attributes 302
Variable Sample Size 304
Process Capability Analysis 307
Basic Concepts Review Questions 309
Skill-Building Exercises 309
Problems and Applications 310
Case: Quality Control Analysis 311

PART II: DECISION MODELING AND ANALYSIS 313

CHAPTER 9 Building and Using Decision Models 315
Introduction 315
Decision Models 316
Model Analysis 319
What-If Analysis 320
Model Optimization 324
Tools for Model Building 326
Logic and Business Principles 327
Common Mathematical Functions 328
Data Fitting 328
Spreadsheet Engineering 330
Modeling Examples 331
Gasoline Consumption 331
Revenue Model 331
New Product Development 333
Models Involving Uncertainty 333
Newsvendor Model 334
Monte Carlo Simulation 334
Fitting Probability Distributions to Data 337
Model Assumptions, Complexity, and Realism 339
Basic Concepts Review Questions 342
Skill-Building Exercises 342
Problems and Applications 342
Case: An Inventory Management Decision Model 347

CHAPTER 10 Risk Analysis and Monte Carlo Simulation 349
Introduction 349
Monte Carlo Simulation Using *Crystal Ball* 351
A Financial Risk Analysis Simulation 351
Defining Model Inputs 351
Running a Simulation 358
Saving Crystal Ball *Runs* 359
Analyzing Results 359
Crystal Ball *Reports and Data Extraction* 366
Crystal Ball *Functions and Tools* 367

Applications of Monte Carlo Simulation 369
Newsvendor Model 369
Overbooking Model 373
Cash Budgeting 374
New Product Development Model 379
Project Management 382
Basic Concepts Review Questions 388
Skill-Building Exercises 388
Problems and Applications 389
Case: The Bellin Project 393

CHAPTER 11 Decisions, Uncertainty, and Risk 394
Introduction 395
Decision Making without Uncertainty and Risk 395
Decisions Involving a Single Alternative 396
Decisions Involving Non-Mutually Exclusive Alternatives 396
Decisions Involving Mutually Exclusive Alternatives 397
Decisions Involving Uncertainty and Risk 398
Making Decisions with Uncertain Information 398
Decision Strategies 399
Risk and Variability 401
Expected Value Decision Making 403
Opportunity Loss and Expected Value of Perfect Information 405
Analysis of Portfolio Risk 406
The "Flaw of Averages" 407
Decision Trees 408
New Drug Development Model 409
Decision Trees and Risk 412
Sensitivity Analysis in Decision Trees 414
Utility and Decision Making 415
Exponential Utility Functions 419
Basic Concepts Review Questions 420
Skill-Building Exercises 420
Problems and Applications 421
Case: The Sandwich Decision 427

CHAPTER 12 Queues and Process Simulation Modeling 428
Introduction 429
Queues and Queuing Systems 429
Basic Concepts of Queuing Systems 430
Customer Characteristics 430
Service Characteristics 431
Queue Characteristics 432
System Configuration 432
Performance Measures 432
Analytical Queuing Models 433
Single-Server Model 433
Little's Law 435
Process Simulation Concepts 436

Process Simulation with *SimQuick* 437
A Queuing Simulation Model 438
Queues in Series with Blocking 443
Grocery Store Checkout Model with Resources 444
Manufacturing Inspection Model with Decision Points 447
Pull System Supply Chain With Exit Schedules 449
Other SimQuick *Features and Commercial Simulation Software* 451
Continuous Simulation Modeling 453
Basic Concepts Review Questions 456
Skill-Building Exercises 457
Problems and Applications 457
Case: Production/Inventory Planning 462
Appendix: *SimQuick* Reference Manual 462

CHAPTER 13 Linear Optimization 467
Introduction 467
Building Linear Optimization Models 468
Characteristics of Linear Optimization Models 471
Implementing Linear Optimization Models on Spreadsheets 472
Excel Functions to Avoid in Modeling Linear Programs 473
Solving Linear Optimization Models 474
Solving the SSC Model 477
Solver *Outcomes and Solution Messages* 479
Interpreting Solver *Reports* 480
How Solver *Creates Names in Reports* 484
Difficulties with Solver 484
Applications of Linear Optimization 485
Process Selection 487
Blending 488
Portfolio Investment 489
Transportation Problem 490
Interpreting Reduced Costs 493
Multiperiod Planning 494
A Model with Bounded Variables 497
A Production/Marketing Allocation Model 503
How *Solver* Works 507
Basic Concepts Review Questions 508
Skill-Building Exercises 508
Problems and Applications 509
Case: Haller's Pub & Brewery 518

CHAPTER 14 Integer and Nonlinear Optimization 519
Introduction 519
Integer Optimization Models 520
A Cutting Stock Problem 520
Solving Integer Optimization Models 521
Integer Optimization Models with Binary Variables 524
Project Selection 524
Site Location Model 526

Computer Configuration 528
A Supply Chain Facility Location Model 531
Mixed Integer Optimization Models 532
Plant Location Model 532
A Model with Fixed Costs 533
Logical Conditions and Spreadsheet Implementation 535
Nonlinear Optimization 535
Hotel Pricing 535
Solving Nonlinear Optimization Models 537
Markowitz Portfolio Model 540
Evolutionary Solver *for Nonlinear Optimization* 542
Risk Analysis and Optimization 546
Combining Optimization and Simulation 549
A Portfolio Allocation Model 549
Using OptQuest 550
Basic Concepts Review Questions 559
Skill-Building Exercises 559
Problems and Applications 559
Case: Tindall Bookstores 568

Appendix
Table A.1 The Cumulative Standard Normal Distribution 572
Table A.2 Critical Values of t 574
Table A.3 Critical Values of x^2 577
Table A.4 Critical Values of F 578
Table A.5 Critical Values[a] of the Studentized Range Q 581

Index 583
