Survey Papers
Constrained Control Concepts in Power Plants and Power Systems for Avoiding Emergency Conditions

Issues in Modelling and Simulation of Power Plants p. 15
Evaluation of the Operation of the Interconnected West European Grid p. 25

Modelling and Simulation of Power Plants
Simulation of Heat Exchangers in Fossil Fired Power Plants: A method to avoid Gibbs’ phenomena p. 31
Temperature Control using State Feedback in a Fossil Fired Power Plant p. 37
Dynamic Modeling of a Single Shaft Gas Turbine p. 43
Real-time Modelling of a Ventilation System for a Power Plant Simulator p. 55

Control of Power Plants
On the Automatic Start-up/Shutdown System for a Combined Cycle with Two Different Gas Turbines p. 63
A Combustion Air Changeover Control for Heat Recovery Boilers p. 69
Optimization of Daily Combined Heat and Power Production p. 75
Predictor-based Optimal Control of Supply Temperature in District Heating Systems p. 81

Self-tuning Constrained Control of a Power Plant p. 87

Advanced Control Schemes
Continuous-time Generalised Predictive Control of a Boiler Model p. 93
Comparison of Classical PID and Modern H[actual symbol not reproducible]-control Concepts for Frequency and Voltage Control of Power Plants p. 97
Control Strategies Securing Low Emission Values in the Berrenrath FBC-plant p. 103
Study of the Start-up Control of a Drum Boiler by Means of a Mathematical Model p. 115
A Design and Implementation of a Combustion Controller in Microcomputer-based Multiloop Controller MMC-90 p. 123

Strategies for Activation of Stored Energy
Improved Unit Dynamic Response using Condensate Stoppage p. 129
Economic Spinning Reserve Power by Controlled Preheater Activation p. 135
Novel Stored Energy Techniques for Spinning Reserve p. 141
Actual Dynamic Performance of Thermal Power Plants with Various Designs and Control Systems p. 147
Theoretical Investigation of the Frequency Behaviour of the Tirolean Grid after Transmission Line Separation Leading to Germany p. 153

State Estimation; Fault Analysis; Diagnosis
Computing-predictor-based MRACS for Nonlinear Time-varying Power Plants Based on a New System Identification Method p. 159
Detection of Measurement Errors in Nuclear Power Plants p. 165
State Estimation in Thermal Power Stations p. 171
Computer-based Sensor and Process Fault Diagnosis in Real Time p. 177
