Preface

Evolving notions on the cause and purpose of fever p. 1

The effect of interleukin-1 receptor antagonist on IL-1, LPS, staphylococcus epidermidis and tumor necrosis factor fever p. 11

What is the second IL-1 receptor for? p. 19

Intracellular signalling mechanisms of interleukin 1 and tumour necrosis factor: evidence for protein kinase activation p. 29

Studies on neuronal pools of interleukin-1 and on the role of the adrenergic and cholinergic systems in the pyrogenic/thermogenic response to interleukin-1 p. 39

Regulation of IL-6 production p. 49

Interleukin 1-binding protein: a new soluble cytokine receptor? p. 57

Interferon-[gamma] general biological properties and effects on the neuroendocrine axis p. 65

Neuroendocrine and other in vivo effects of interleukin-1 in mouse and man p. 79

The role of IL-1, TNF, and IL-6 in fever in the rat p. 87

Responses of humans to bacterial endotoxin p. 97

Function of the OVLT as an entrance into the brain for endogenous pyrogens p. 107

Prostaglandin E[subscript 2]: a pathogenetic link for fever p. 115

[alpha]-MSH peptides modulate fever and inflammation p. 123

The involvement of the central adrenergic system in mediation of interleukin 1 induced fever p. 137

Central mechanisms of fever p. 145

Prostaglandin, the OVLT and fever p. 155

The OVLT: the interface between the brain and circulating pyrogens? p. 167

Blood-brain barrier, entry of cells and pyrogens p. 177

Modulation of severe infections by administration of cytokines p. 191

Metabolic response to injury: physiologic or pathologic? p. 201

Cytokine regulation during inflammation: modulation by autoantibodies and fever p. 215

New neurobiological concepts of the genesis of fever and of antipyresis p. 225

Brown adipose tissue thermogenesis and fever p. 235

Cytokines in thermal and physical trauma p. 249

Cytokines, CRF and bat in fever p. 257

Index p. 267
