A Contemporary Industrial Perspective on Process Control Theory and Practice
Control System Improvement of an Industrial Chemical Reactor
Computational Fluid Dynamics as a Tool for Chemical Reactor Optimization
Control of Forced Cyclic Process
Fuzzy Logic Controller Design for pH-Control in a CSTR
Reliable and Efficient Optimization Strategies for Nonlinear Model Predictive Control
Optimal Estimation of States in Differential-Algebraic Equation Systems
Use of Iterative Dynamic Programming in Optimization of Reactor Systems
Hard Constraints in Control and State Variables of Multivariable Nonlinear Processes Resolved by Elementary Nonlinear Decoupling
Time-Variable Models for Mixing Processes Under Unsteady Flow and Volume
General Methods of Kinetic Model Reduction
Robust Decentralized Control of A CSTR with Complex Reaction Scheme
Input Multiplicity and Right Half Plane Zeros in Ideal Two-Product Distillation
Heterogeneous Azeotropic Distillation Involving an Embedded Two-Liquid Phase Region
Hierarchical Sub-Optimal Control of Batch Distillation with Slop Recycling
High Performance Distillation Column Control Through Novel Control Configurations
A DAE Framework for Modeling and Control of Reactive Distillation Columns
Identification of a Pilot Plant Reactive Distillation Process using RBF Networks
Reduced Modeling of Complex Fluid Mixtures by the Wavelet-Galerkin Method
An Object-Oriented Method for Process Modelling
Hybrid Simulation of Flexible Batch Plants
Neural Network Based Estimators for a Batch Polymerization Reactor
ALAMBIC - A Software Package for Optimising Design and Operation of Batch Distillation Columns
Comparison of Inverted and Regular Batch Distillation
Experimental Evaluation of a Fault Detection and Identification Scheme for Chemical Processes
Steady State and Dynamic Simulation of FCC Reactor Units
Dynamics of the Jarosite Conversion Process
Model-Based Temperature Control of Fed-Batch Reactors
Practical Control Methods for Distillation Columns Using Neural Networks
Fine Tuning of Multiloop PI Controllers Using Fuzzy Set Theory
Multivariable Control of Distillation Column
Simulation of Multicomponent Batch Distillation with Chemical Reactions Processes
Physical Implications of Periodic Solutions in a Fixed Bed Reactor with Recycle
Analysis of Process Dynamics Using Steady State Flowsheeting Tools
Neural Network Identification of an In-Line pH Process
Some Aspects of Integrated Process Operation
Optimization in Model Based Control
Multiple Steady States in Azeotropic Distillation and Their Effect on Column Operation and Design p. 243
Comparison of the Separation Performances of a Multi-Effect Batch Distillation System and a Continuous Distillation System p. 249
Analysis and Design of CASCADE Control Schemes for Distillation p. 255
Plantwide Control Problem for a Process with Three Distillation Columns and Two Recycle Streams p. 269
Wave-Net Based On-Line Quality Inference System for Polymerization Processes p. 275
State and Parameter Estimation with Augmented Kalman Filter Applied to an Industrial Polymer Reactor p. 281
Kalman Filter and Neural Network for On-Line Estimation of Polymer Chain Characteristics p. 287
Interactions Between Production Rate Optimization and Temperature Control in Gas Phase Polyethylene Reactors p. 293
Controllability Issues Concerning Particle Size in Emulsion Polymerization p. 299
Multivariable Control of a Continuous Crystallization Process Using Experimental Input-Output Models p. 305
A Dynamic Model of a Superfractionator: A Test Case for Comparing Distillation Control Techniques p. 311
Identification for Control of High-Purity Distillation Columns - A Benchmark Problem p. 317
Distillation Column Control Benchmarks: Four Typical Problems p. 323
The Impact of Process Directionality on Robust Control in Non-Ideal Distillation p. 327
Robust Analysis of Distillation Column Dynamics p. 333
Control of Chemical Reactors Using Multiple-Model Adaptive Control (MMAC) p. 345
Flexibility Analysis of Dynamic Chemical Processes p. 351
Control of a Batch Reactor Using a Multivariate Statistical Controller Design p. 357
Integration of Process and Control Designs by Nonlinear Geometric Methods p. 363
Dynamic Heat Balance Model for Industrial Batch Reactors and its Applications p. 369
Methods of Duality in Problems about Expediency of Usage and Optimization of Cyclic Regimes of Technological Processes p. 375
Status and Challenges of Intelligent Plant Control p. 381
Risk-Conscious Operation of Batch Processes p. 401
Synthesis of Procedural Controllers for Batch Chemical Processes p. 407
Temperature Control of a Batch Esterification Reactor Overcoming Non-Lineairties Using Adaptive Gain p. 413
Temperature Control of a Batch Reactor by On-Line Identification of a Vapor Pressure Law p. 419
Effect of Model Uncertainty on the Tendency Modeling, Optimization and Control of Batch Reactors p. 425
Nonlinear Inferential Parallel Cascade Control p. 433
Nonlinear Observer Design with Application to Chemical Reactors p. 439
pH Control in the Presence of Precipitation Equilibria  p. 445
Partitioning-Space Approach for Nonlinear Process Control  p. 451
Limitations to Input-Output Analysis of Cascade Control of Unstable Chemical Reactors  p. 457
Automatic Control of Chemical Reactors at Unstable Steady-States  p. 463
Multivariable Quality Control of a Crude Oil Fractionator  p. 469
Composition Estimators for a Distillation Column: Theory and Experiments  p. 475
Prediction and Analysis of the Effect of Reboiler and Condenser Holdup on the Dynamic Behaviour of Distillation Columns  p. 481
Development and Experimental Verification of a Simulation Tool for Column Startup  p. 489
Verification of a Distillation Column Benchmark  p. 495
Author Index  p. 501
