Assessment of Xenobiotic-Induced Nephrotoxicity

Isolated Renal Cells in the Study of Nephron Heterogeneity and Nephrotoxicity

The Use of Cultured Renal Epithelial Cells in in Vitro Assessment of Xenobiotic-Induced Nephrotoxicity

NMR: A Tool for the Study of Renal Function and Nephrotoxicity

Renal Disposition of Xenobiotics

Interaction of Xenobiotics with Organic Anion and Cation Transport Systems in Renal Proximal Tubule Cells

Renal Transport of Heavy Metals

Renal Transport and Metabolism of Mercapturic Acids and Their Precursors, the S-Conjugates of Glutathione and Cysteine

Renal Xenobiotic Metabolism: Role in Bioactivation of Nephrotoxic Xenobiotics

Bioactivation and Nephrotoxicity and Xenobiotics

Bioactivation of Halogenated Xenobiotics by S-Conjugate Formation

[alpha]2u-Globulin-Related Nephrotoxicity

Cyclosporin-A-Induced Nephrotoxicity: Current Concepts and Controversies

The Renal Tubular Transport and Nephrotoxicity of Beta-Lactam Antibiotics

The Nephrotoxicity of Heavy Metals

The Nephrotoxicity of Anticancer Drugs

Hormone-Induced Nephrocarcinogenicity

Nephrocarcinogenicity of Haloalkenes and Alkynes
