

Preface

Seismological Constraints on the Velocity Structure and Fate of Subducting
Lithospheric Slabs: 25 Years of Progress

Introduction: Slabs and Mantle Convection

How Seismology Provides Information about Slabs

Earthquakes in Slabs

General Characterization of Slab and Wedge Structures: First-Order Slab Anomalies

Guided Waves

Wedge Structure

Thermal and Mechanical Models

Travel Time Pattern Constraints on Slab Velocity Structure: Relative Travel Time
Patterns and Raytracing Analyses

Residual Sphere Modeling

Tomographical Imaging of Slab Velocity Structure

Northwest Pacific

Southwest Pacific

South America, Central America, and the Caribbean

Cascadia, Aleutians, and Alaska

Mediterranean and Hindu Kush

Slab Boundaries: Converted and Reflected Phases: Slab Seismicity and Double Benioff
Zones

Constraints on Slab Boundaries and Internal Structure

Seismic Imaging of Phase Boundaries in Slabs

Focusing, Multipathing, and Diffraction Effects of Slab Structure: Short-Period
Defocusing and Multipathing Effects

Long-Period Defocusing and Diffraction Effects

Future Directions in Slab Imaging
