Introduction to Normal Bone Physiology and Pathophysiology
The Bone Organ System: Form and Function
Osteoblast Biology
Osteoclast Biology
The Biochemistry of Bone
Developmental Biology of Bone
Mouse Genetics as a Tool to Study Bone Development and Physiology
Parathyroid Hormone and Parathyroid Hormone-Related Protein
Calcitonin
Vitamin D: Biology, Action, and Clinical Implication
Regulation of Bone Cell Function
Skeletal Biology of Androgens
Coupling of Bone Resorption and Formation during Bone Remodeling
Cytokines and Bone Remodeling
Bone Growth Factors
Skeletal Heterogeneity and the Purposes of Bone Remodeling: Implications for the
Understanding of Osteoporosis
Basic Biology of Bisphosphonates
Structure and Biomechanics
Skeletal Development: Mechanical Consequences of Growth, Aging, and Disease
Inhibition of Osteopenia by Biophysical Intervention
Biomechanics of Age-Related Fractures
Epidemiology and Risk Factors
Introduction to Epidemiologic Methods
Magnitude and Impact of Osteoporosis and Fractures
Race, Ethnicity, and Osteoporosis
Epidemiology of Osteoporosis Fractures: The European Experience Chris de Laet and
Jonathan Reeve
Bone Mineral Acquisition in Utero, during Infancy, and throughout Childhood
Bone Acquisition in Adolescence
Genetics and Genomics of Osteoporosis
Nutrition and Risk for Osteoporosis
Physical Activity and Osteoporosis
Premenopausal Reproduction and Hormonal Characteristics and Risk for Osteoporosis
Postmenopausal Endogenous and Exogenous Hormones, Degree of Obesity, Thiazide
Diuretics, and Risk of Osteoporosis
The Effects of Tobacco and Alcohol Use on Bone
Falls as Risk Factors for Fractures
Assessing Fracture
Outcomes of Osteoporotic Fractures

Pathophysiology
The Nature of Osteop
