

## Models

Introduction

A Single-Server Queue

A Simple Inventory System

Random Number Generation

Lehmer Random Number Generation: Introduction

Lehmer Random Number Generation: Implementation

Monte Carlo Simulation

Monte Carlo Simulation Examples

Discrete-Event Simulation

Discrete-Event Simulation

Multi-Stream Lehmer Random Number Generation

Discrete-Event Simulation Models

Statistics

Sample Statistics

Discrete-Data Histograms

Continuous-Data Histograms

Correlation

Next-Event Simulation

Next-Event Simulation

Next-Event Simulation Examples

Event List Management

Discrete Random Variables

Discrete Random Variables

Generating Discrete Random Variables

Discrete Random Variable Applications

Discrete Random Variable Models

Random Sampling

Continuous Random Variables

Continuous Random Variables

Generating Continuous Random Variables

Continuous Random Variable Applications

Continuous Random Variable Models

Nonstationary Poisson Processes

Acceptance-Rejection

Input Modeling

Error in Discrete-Event Simulation

Modeling Stationary Processes

Modeling Nonstationary Processes

Output Analysis

Interval Estimation

Monte Carlo Estimation

Finite-Horizon and Infinite-Horizon Statistics

Batch Means

Steady-State Single-Server Service Node Statistics

Projects

Empirical Tests of Randomness

Birth-Death Processes

Finite-State Markov Chains

A Network of Single-Server Service Nodes

Appendices

Simulation Languages

Integer Arithmetic

Parameter Estimation Summary

Random Variate Models

Random Variate Generators
