Objects
What is an object?
The object symbol
The difference between objects and instances
Anatomy of an object table
Object table rules
All attribute values are atomic
Instance order is ignored
Attribute order is ignored
Each instance is unique
Object categories
Hard or physical objects
Soft objects
Discovered objects
Invented objects
Simulated objects
Specification objects
Incident objects
Interaction objects
Role objects
Frequently asked questions about objects
Is it okay to have an object with only one attribute?
Can an object have only one instance?
What does it mean when an object is drawn with a dashed border?
Attributes
What is an attribute?
Purpose
Descriptive attributes
Naming attributes
Naming or descriptive?
Identification role
Single attribute identifiers
Compound identifiers
Multiple identifiers
Overlapping identifiers
Dependence on other attributes
Dependence on the identifier
Dependence on the whole identifier
Value assignment
Changing a non-identifier value
Changing an identifier value
Universal meaning
Always applicable
Never applicable (for some instances)
Not applicable—at the moment
Delayed assignment
More than one meaning
Origin
Native attributes
Referential attributes
Origin and identifiers
Summary of Attribute Properties
Frequently asked questions about attributes
How many attributes can an object have?
How do I know I have all of the attributes?
The S-M method seems to require a lot of invented IDs. Is that inefficient?
Relationships
What is a relationship?
Abstracting a relationship
The relationship symbol
Relationships and rules
Relationships define application policies
Example 1: Master shapes
Example 2: Copied shapes
Relationships are important
Relationship types
Visualizing relationship types
Snapshot notation
Type 1: Binary Relationships
Binary relationships and relationship instances
Type 2: Associative Relationships
Type 3: Supertype Relationships
And now for some examples
Binary relationships
Don’t get instances and abstractions confused
How to keep it all straight
Icons
Blobs, dots and arcs
Tables
Non-refle
