Hare's Teeth to Fluorides, Historical Aspects of Dentifrice Use
The Significance of Toothpaste in Oral Hygiene
Behavioral Aspects of Oral Hygiene
Halitosis
Dentifrices in the Control of Dental Caries
Laboratory and Human Studies to Elucidate the Mechanism of Action of Fluoride-Containing Dentifrices
Mechanistic Interactions of Dentifrices with De- and Remineralization
Uptake of Fluoride into Enamel and Caries Reduction
Relationships and a Pilot Experiment in Rats
Fluoride Concentrations in Dentifrices in Relation to Efficacy, Side-Effects, and Salivary Clearance
Oral Fluoride Reservoirs and their Relationship to Anticaries Efficacy
Root Surface Caries in Humans: A Review
The Use of Dentifrices in the Treatment of Dental Caries
The Influence of Saliva Constituents and Properties on Enamel Remineralization In Situ
Fluoride in Saliva and Plaque in Relation to Fluoride in Drinking Water and in Dentifrices
Metal Ions in Oral Hygiene Products
Considerations Concerning the Sodium Lauryl Sulphate Content of Dentifrices
Human Clinical Studies of Anti-Plaque and Anti-Gingivitis Agents Dosed From a Dentifrice
Mechanism of Action of Clinically Proven Anti-Plaque Agents
Recent Advances in Plaque/Gingivitis Control
The Evaluation of Toothpaste Products in Promoting Gingival Health
Chemical Plaque by Surface-Active Substances
Tartar Control Dentifrices
Effects of Sodium Pyrophosphate and Ethane Hydroxy Diphosphonate on Albumin Adsorption
Fluoride Dentifrices: A Possible Cariostatic Mechanism
Oral Ecology: A Critical Review
Microbiological Aspects of Dentifrices
Dentifrices for the Treatment of Dentine Hypersensitivity
Abrasive and Chemical Effects of Dentifrices
