Epidemiology and Physiology
Hyperglycemia, Diabetes and Vascular Disease: An Overview
Epidemiology of Hyperglycemia and Atherosclerosis
Altered Platelet Function in Diabetes Mellitus: Effect of Glycemic Regulation and Antiplatelet Agents
Diabetes Mellitus and the Vascular Endothelin
Cerebral Microvascular Transport and Metabolism: Implications for Diabetes
Polyols, Myoinositol and Signal Transduction
Mechanisms of Glucose and Diabetes-Induced Vascular Dysfunction
Mechanisms of Early Hyperglycemia-Induced Alterations in Vascular Metabolism and Autoregulation
Dissociation of Retinopathy and Nephropathy in Animal Models of Diabetes: Diabetes vs. Galactosemia
Cell Culture Model for the Study of Vascular Complications of Diabetes: The Effect of High Glucose Levels on Metabolism and Growth of Vascular Cells
Mobilization of Arachidonic Acid from Diacyl and Ether Phospholipids in Cultured Endothelial Cells
Protein Glycates and Glycosoaminoglycans
Glycation and Autoxidation of Proteins in Aging and Diabetes
Nonenzymatic Glycosylation of Macromolecules: Prospects for Pharmacologic Modulation
Cell Mediated Interactions of Advanced Glycosylation Endproducts and the Vascular Wall
Effects on Nonenzymatic Glycation on Molecular Interactions of Basement Membrane Molecules
The Effects of Diabetes on Kidney Proteoglycans
