Preface
Laws Form Counterfactually Stable Sets
Welcome
Their necessity sets the laws apart
The laws's persistence under counterfactuals
Nomic preservation
Beyond nomic preservation
A host of related problems: triviality, circularity, arbitrariness
Sub-nomic stability
No nonmaximal set containing accidents possesses sub-nomic stability
How two sub-nomically stable sets must be related: multiple strata of natural laws

Why the laws would still have been laws
Conclusion: laws form stable sets
Natural Necessity
Our goal in this chapter
The Euthyphro question
David Lewis's "Best-System Account"
Lewis's account and the laws's supervenience
The Euthyphro question returns
Are all relative necessities created equal?
The modality principle
A proposal for distinguishing genuine from merely relative modalities
Borrowing a strategy from Chapter 1
Necessity as maximal invariance
The laws form a system
Scientific essentialism squashes the pyramid
Why there is a natural ordering of the genuine modalities
Three Payoffs of My Account
The itinerary
Could the laws of nature change?
Why the laws are immutable
Symmetry principles as meta-laws
The symmetry meta-laws form a nomically stable set
The relation between chancy facts and deterministic laws
How to account for the relation
A World of Subjunctives
What if the lawmakers were subjunctive facts?
The lawmakers's regress
Stability
Avoiding adhocery
Instantaneous rates of change and the causal explanation problem
Et in Arcadia ego
The rule of law
Why the laws must be complete
Envoi: Am I cheating?
