Representation of visual stimuli in inferior temporal cortex
Neurophysiological mechanisms underlying face processing within and beyond the temporal cortical visual areas
Organization and functions of cells responsive to faces in the temporal cortex
The role of the ‘face-cell’ area in the discrimination and recognition of faces by monkeys
The neuropsychology of lipreading
Face recognition impairments
Functional and anatomical decomposition of face processing: evidence from prosopagnosia and PET study of normal subjects
Facial expressions of emotion: an old controversy and new findings
Lipreading and audio-visual speech perception
The extraction and use of facial features in low bit-rate visual communication
The computer synthesis of expressive faces
Becoming a face expert
The development of face processing skills
Cognitive mechanisms of face processing
Modelling face recognition
Index.
