

Alan Turing and the Turing Machine

Turing's Analysis of Computability, and Major Applications of It

The Confluence of Ideas in 1936

Turing in the Land of  $O(z)$

Mathematical Logic and the Origin of Modern Computing

From Universal Turing Machines to Self-Reproduction

Computerizing Mathematics: Logic and Computation

Logical Depth and Physical Complexity

The Busy Beaver Game and the Meaning of Life

An Algebraic Equation for the Halting Probability

The Price of Programmability

Gandy's Principles for Mechanisms as a Model of Parallel Computation

Influences of Mathematical Logic on Computer Science

Language and Computations

Finite Physics

Randomness, Interactive Proofs, and Zero-Knowledge--A Survey

Algorithms in the World of Bounded Resources

Beyond the Turing Machine

Structure

Mental Images and the Architecture of Concepts

The Fifth Generation's Unbridged Gap

On the Physics and Mathematics of Thought

Effective Processes and Natural Law

Turing Naturalized: Von Neumann's Unfinished Project

Complexity Theory and Interaction

Mechanisms for Computing Over Arbitrary Structures

Comparing the Church and Turing Approaches: Two Prophetic Messages

Form and Content in Thinking Turing Machines
