Consciousness and Causation
Making robots conscious of their mental states
A framework for verbalizing unconscious knowledge based on inductive logic programming
Legal responsibility and causation
Adapting Good's Q theory to the causation of individual events

Computer Vision
Making robots see
Agents that Learn
A framework for behavioural cloning
Control skill, machine learning and handcrafting in controller design
Personalized mail agent using inductive logic programming
An experiment with browsers that learn
Toward incremental knowledge correction for agents in complex environments
The spontaneous self-organization of an adaptive language

Formalisms and Models of Learning
Developments in computational learning and discovery theory within the framework of elementary formal systems
A learnability model for universal representations and its application to top-down induction of decision trees
A learning mechanism for logic programs using dynamically shared substructures
PAC-learning of preference relations over interpretations in lazy nonmonotonic reasoning
Tables, graphs and logic for induction

Applied Scientific Discovery
A connectionist approach to numeric law discovery
Drug design by machine learning

Concurrent Declarative Programming
Debugging for a declarative programming language
A massively parallel simplification logic for functional and relational computing

History of Computing
The Turing-Wilkinson lecture series on the automatic computing engine
A lecture and two broadcasts on machine intelligence
Repairs to Turing's universal computing machine
his logical machine and work on induction and Boolean algebra
