

Independence	
The random energy model	p. 93
Definition of the model	p. 93
Thermodynamics of the REM	p. 94
The condensation phenomenon	p. 100
A comment on quenched and annealed averages	p. 101
The random subcube model	p. 103
Notes	p. 105
The random code ensemble	p. 107
Code ensembles	p. 107
The geometry of the random code ensemble	p. 110
Communicating over a binary symmetric channel	p. 112
Error-free communication with random codes	p. 120
Geometry again: Sphere packing	p. 123
Other random codes	p. 126
A remark on coding theory and disordered systems	p. 127
Appendix: Proof of Lemma 6.2	p. 128
Notes	p. 128
Number partitioning	p. 131
A fair distribution into two groups?	p. 131
Algorithmic issues	p. 132
Partition of a random list: Experiments	p. 133
The random cost model	p. 136
Partition of a random list: Rigorous results	p. 140
Notes	p. 143
Introduction to replica theory	p. 145
Replica solution of the random energy model	p. 145
The fully connected p-spin glass model	p. 155
Extreme value statistics and the REM	p. 163
Appendix: Stability of the RS saddle point	p. 166
Notes	p. 169
Models on Graphs	
Factor graphs and graph ensembles	p. 173
Factor graphs	p. 173
Ensembles of factor graphs: Definitions	p. 180
Random factor graphs: Basic properties	p. 182
Random factor graphs: The giant component	p. 187
The locally tree-like structure of random graphs	p. 191
Notes	p. 194
Satisfiability	p. 197
The satisfiability problem	p. 197

Algorithms	p. 199
Random K-satisfiability ensembles	p. 206
Random 2-SAT	p. 209
The phase transition in random $K(\geq 3)$ -SAT	p. 209
Notes	p. 217
Low-density parity-check codes	p. 219
Definitions	p. 220
The geometry of the codebook	p. 222
LDPC codes for the binary symmetric channel	p. 231
A simple decoder: Bit flipping	p. 236
Notes	p. 239
Spin glasses	p. 241
Spin glasses and factor graphs	p. 241
Spin glasses: Constraints and frustration	p. 245
What is a glass phase?	p. 250
An example: The phase diagram of the SK model	p. 262
Notes	p. 265
Bridges: Inference and the Monte Carlo method	p. 267
Statistical inference	p. 268
The Monte Carlo method: Inference via sampling	p. 272
Free-energy barriers	p. 281
Notes	p. 287
Short-Range Correlations	
Belief propagation	p. 291
Two examples	p. 292
Belief propagation on tree graphs	p. 296
Optimization: Max-product and min-sum	p. 305
Loopy BP	p. 310
General message-passing algorithms	p. 316
Probabilistic analysis	p. 317
Notes	p. 325
Decoding with belief propagation	p. 327
BP decoding: The algorithm	p. 327
Analysis: Density evolution	p. 329
BP decoding for an erasure channel	p. 342
The Bethe free energy and MAP decoding	p. 347
Notes	p. 352
The assignment problem	p. 355
The assignment problem and random assignment ensembles	p. 356
Message passing and its probabilistic analysis	p. 357
A polynomial message-passing algorithm	p. 366

Combinatorial results	p. 371
An exercise: Multi-index assignment	p. 376
Notes	p. 378
Ising models on random graphs	p. 381
The BP equations for Ising spins	p. 381
RS cavity analysis	p. 384
Ferromagnetic model	p. 386
Spin glass models	p. 391
Notes	p. 399
Long-Range Correlations	
Linear equations with Boolean variables	p. 403
Definitions and general remarks	p. 404
Belief propagation	p. 409
Core percolation and BP	p. 412
The Sat-Unsat threshold in random Xorsat	p. 415
The Hard-Sat phase: Clusters of solutions	p. 421
An alternative approach: The cavity method	p. 422
Notes	p. 427
The 1RSB cavity method	p. 429
Beyond BP: Many states	p. 430
The 1RSB cavity equations	p. 434
A first application: Xorsat	p. 444
The special value $x=1$	p. 449
Survey propagation	p. 453
The nature of 1RSB phases	p. 459
Appendix: The $SP(y)$ equations for Xorsat	p. 463
Notes	p. 465
Random K-satisfiability	p. 467
Belief propagation and the replica-symmetric analysis	p. 468
Survey propagation and the 1RSB phase	p. 474
Some ideas about the full phase diagram	p. 485
An exercise: Colouring random graphs	p. 488
Notes	p. 491
Glassy states in coding theory	p. 493
Local search algorithms and metastable states	p. 493
The binary erasure channel	p. 500
General binary memoryless symmetric channels	p. 506
Metastable states and near-codewords	p. 513
Notes	p. 515
An ongoing story	p. 517
Gibbs measures and long-range correlations	p. 518

Higher levels of replica symmetry breaking	p. 524
Phase structure and the behaviour of algorithms	p. 535
Notes	p. 538
Symbols and notation	p. 541
Equivalence relations	p. 541
Orders of growth	p. 542
Combinatorics and probability	p. 543
Summary of mathematical notation	p. 544
Information theory	p. 545
Factor graphs	p. 545
Cavity and message-passing methods	p. 545
References	p. 547
Index	p. 565
