

List of symbols	p. xiv
Fundamentals	
The crystalline state and its study	p. 3
States of matter	p. 3
Anisotropy	p. 4
The significance of order	p. 6
Crystals	p. 9
Solids which are not crystals	p. 11
Crystal defects	p. 13
Analysing the structure of crystals and molecules	p. 13
Why do we use X-rays?	p. 17
Why do we use diffraction?	p. 20
Protein crystals	p. 20
Summary	p. 21
Bibliography	p. 21
Vector analysis and complex algebra	p. 23
Vectors	p. 23
What is a vector?	p. 23
Vector addition	p. 25
Multiplication by a scalar	p. 27
Unit vectors	p. 27
Components	p. 30
Vector subtraction	p. 32
Multiplication by a vector to give a scalar	p. 33
Multiplication by a vector to give a vector	p. 36
The scalar triple product and the vector triple product	p. 39
Complex Algebra	p. 42
What is a complex number?	p. 43
The Argand diagram	p. 44
The addition of complex numbers	p. 46
Multiplication of complex numbers	p. 47
The complex conjugate	p. 48
The complex exponential representation	p. 49
Complex exponentials and trigonometric functions	p. 51
Summary	p. 52
Appendix: Determinants	p. 55
Bibliography	p. 57
Crystal systematics	p. 58
What is a crystal?	p. 58
Symmetry	p. 61
The description of the lattice	p. 62

Crystal directions	p. 72
Lattice planes	p. 72
Symmetry operations and symmetry elements	p. 76
Point groups and Laue groups	p. 84
Space groups	p. 87
Summary	p. 91
Bibliography	p. 92
Waves and electromagnetic radiation	p. 93
Mathematical functions	p. 93
What is a wave?	p. 94
The mathematical description of a wave	p. 97
The wave equation	p. 104
The solution of the wave equation	p. 106
The principle of superposition	p. 111
Phase	p. 114
Waves and complex exponentials	p. 118
Intensity	p. 120
Waves which are not plane	p. 121
Electromagnetic waves	p. 122
The form of electromagnetic waves	p. 124
The interaction of electromagnetic radiation with matter	p. 126
Summary	p. 131
Bibliography	p. 132
Fourier transforms and convolutions	p. 133
Integrals	p. 133
Curve sketching	p. 135
Fourier transforms	p. 141
Mathematical conventions and physical reality	p. 146
The inverse transform	p. 148
Real space and Fourier space	p. 151
Delta functions	p. 152
Fourier transforms and delta functions	p. 154
Symmetrical and antisymmetrical functions	p. 164
Convolutions	p. 166
The Fourier transform of a convolution	p. 172
The Patterson function	p. 173
Summary	p. 176
Proof of Fourier's theorem	p. 179
Proof of convolution theorem	p. 180
Bibliography	p. 183
Diffraction	p. 184

The interaction of waves with obstacles	p. 184
The diffraction of water waves	p. 185
Diffraction and information	p. 189
The diffraction of light	p. 190
X-ray diffraction	p. 192
The mathematics of diffraction	p. 192
Diffraction and Fourier transforms	p. 198
The significance of the Fourier transform	p. 200
Fourier transforms and phase	p. 203
Fourier transforms and the wave equation	p. 205
Fourier transforms and information	p. 206
The inverse transform	p. 208
The significance of the inverse transform	p. 210
Experimental limitations	p. 213
Summary	p. 214
Bibliography	p. 215
	p. 216
Diffraction Theory	
Diffraction by one-dimensional obstacles	p. 221
The geometrical arrangement	p. 221
One narrow slit	p. 224
One wide slit	p. 226
Two narrow slits	p. 227
Young's experiment	p. 228
Two wide slits	p. 232
Three narrow slits	p. 235
Three wide slits	p. 236
N narrow slits	p. 237
N wide slits	p. 238
An infinite number of narrow slits	p. 239
An infinite number of wide slits	p. 240
The significance of the diffraction pattern	p. 241
Another way of looking at N wide slits	p. 246
Summary	p. 250
Bibliography	p. 253
Diffraction by a three-dimensional lattice	
The diffraction pattern of a crystal	p. 254
Non-normally incident waves	p. 255
The diffraction pattern of a finite three-dimensional lattice	p. 258
The diffraction pattern of an infinite lattice	p. 260
The Laue equations	p. 265

The solution of the Laue equations	p. 266
The reciprocal lattice	p. 269
Reciprocal-lattice vectors and real-lattice planes	p. 274
Bragg's law	p. 277
The Ewald circle	p. 278
The reciprocal lattice and diffraction	p. 281
Why X-ray diffraction works	p. 285
The Ewald sphere	p. 286
The Ewald sphere and diffraction	p. 288
Bragg's law and crystal planes	p. 291
The effect of finite crystal size	p. 293
Summary	p. 294
The contents of the unit cell	p. 297
The scattering of X-rays by a single electron	p. 297
The scattering of X-rays by a distribution of electrons	p. 300
The diffraction pattern of the motif	p. 304
The calculation of the electron density function	p. 307
Fourier synthesis	p. 308
The calculation of structure factors	p. 311
Atomic scattering factors	p. 317
Anomalous scattering	p. 322
Crystal symmetry and X-ray diffraction	p. 323
Diffraction pattern symmetry	p. 324
Friedel's law	p. 326
The breakdown of Friedel's law	p. 328
Friedel's law and electron density calculations	p. 331
Systematic absences	p. 332
The determination of crystal symmetry	p. 335
Summary	p. 336
	p. 339
Structure Solution	
Experimental techniques: sample preparation	p. 343
Protein expression	p. 343
Protein purification	p. 347
Crystallisation	p. 352
Crystal mounting	p. 356
Summary	p. 360
References	p. 360
Experimental techniques: data collection and analysis	p. 362
The origin of X-rays	p. 362
Laboratory X-ray sources	p. 363

Synchrotron sources	p. 368
Optimising the X-ray beam	p. 370
The rotation method	p. 375
Electronic detectors	p. 378
Other aspects of data collection	p. 381
Data processing	p. 383
The basis of intensity data corrections	p. 392
The polarisation factor	p. 397
The Lorentz factor	p. 398
Absorption	p. 401
The temperature factor	p. 405
Scaling and merging intensity measurements	p. 413
Conversion of intensities to structure factor amplitudes	p. 416
Normalised structure factors	p. 418
Completeness of the data	p. 419
Estimating the solvent content	p. 420
Misindexing and twinning	p. 422
Summary	p. 426
References	p. 428
The phase problem and the Patterson function	p. 431
The nature of the problem	p. 431
Why is phase not detectable?	p. 432
The Fourier transform of the intensities	p. 433
The Patterson function and the crystal structure	p. 434
The form of the Patterson function 4-37	
The meaning of the Patterson function	p. 438
Patterson maps	p. 439
Patterson map symmetry	p. 443
The use of Patterson maps	p. 445
Summary	p. 447
Bibliography	p. 448
Molecular replacement	p. 449
Solving the phase problem when the structure of a related protein is known	p. 449
The rotation function	p. 451
Choice of variables in the rotation function	p. 455
Testing the rotation function	p. 460
Refining the rotation function solution	p. 460
Symmetry of the rotation function	p. 461
The translation function	p. 461
Patterson-based translation methods	p. 462
Reciprocal-space translation searches	p. 464

Asymmetric unit of the translation function	p. 467
Non-crystallographic symmetry	p. 468
The packing function	p. 470
Verifying the results	p. 471
Wider applications of molecular replacement	p. 472
Summary	p. 473
References	p. 473
Solving the phase problem experimentally	p. 475
The techniques of solution	p. 475
Isomorphism and the preparation of heavy-atom derivatives	p. 476
Scaling and analysing derivative data	p. 479
The difference Patterson function	p. 483
The methods of Patterson solution	p. 493
Direct methods for locating sites	p. 496
Refinement of heavy-atom sites	p. 505
Cross-phasing	p. 507
The isomorphous replacement method	p. 509
Exploiting anomalous scattering effects in phasing	p. 519
Density modification	p. 530
Summary	p. 538
References	p. 541
Model-building and refinement	p. 545
The necessity for refinement	p. 545
Obtaining the trial structure	p. 548
Assessing the trial structure	p. 551
Least-squares refinement	p. 554
Theory of the least-squares method	p. 555
The use of stereochemical restraints	p. 565
The benefits of non-crystallographic symmetry	p. 571
Modelling rigid-group displacement	p. 572
Simulated annealing	p. 572
Cross-validation	p. 574
Use of Fourier maps in refinement	p. 576
The difference Fourier synthesis	p. 578
The maximum-likelihood method in refinement	p. 586
Validation and deposition	p. 587
Summary	p. 589
References	p. 591
Complementary diffraction methods	p. 595
Finding hydrogen atoms in X-ray structures	p. 595
Neutron protein crystallography	p. 597

Neutron data collection	p. 601
Neutron applications	p. 604
Advantages of perdeuteration	p. 606
X-ray Laue diffraction	p. 607
Laue data processing	p. 608
Summary	p. 609
References	p. 610
	p. 614
General bibliography	p. 616
Recent Developments	p. 617
Index	p. 621
