Introduction
The context of complex system modelling: Introduction
The class of systems studied
The contribution of modelling
Validation and verification of simulation models
Definition of a modelling environment
How to model a system
Conclusion
The object model and its method of analysis and design on the various stages of a development cycle: studies of analysis and design methods
Conclusion
Proposal for an object modelling method: Introduction
The work required for an object analysis and design method
Definition of an object modelling process
Proposal for an object modelling method
Comparison of methods
Conclusions
The analysis and design of multi-domain object-oriented tools for the animation of simulation results
Introduction
Graphic animation of the simulation results
A description of the GIGA toolbox
Limitations of the proposed toolbox
Conclusion
Generation of code and animation of simulations: Introduction
Generation of object-oriented simulation code
Implementation of polymorphism and dynamic classification in QNAP2
The development of software for publishing and animating Petri networks making it possible to generate the simulation code
Conclusions
General Conclusion
