

Introduction: Taking Fossil Species Seriously

The "Species Concept" and the Beginnings of Paleobiology

The Species Problem: Concepts, Conflicts, and Patterns Preserved in the Fossil Record

Studying Species in the Fossil Record: A Review and Recommendations for a More Unified Approach

The Stages of Speciation: A Stepwise Framework for Analysis of Speciation in the Fossil Record

Morphology and Molecules: An Integrated Comparison of Phenotypic and Genetic Rates of Evolution

Fitting Ancestral Age-Dependent Speciation Models to Fossil Data

Contrasting Patterns of Speciation in Reef Corals and Their Relationship to Population Connectivity

Towards a Model for Speciation in Ammonoids

Species of Decapoda (Crustacea) in the Fossil Record: Patterns, Problems, and Progress

Fossil Species as Data: A Perspective from Echinoderms

Species and the Fossil Record of Fishes

Invasive Species and Speciation

Fossil Species Lineages and their Defining Traits: Taxonomic "Usefulness" and Evolutionary Modes

Geographic Clines, Chronoclines, and the Fossil Record: Implications for Speciation Theory
