The Classical Perspective
Why Neural Computing? A personal view p. 1
A theory of neural networks p. 8
Speech recognition based on topology-preserving neural maps p. 26
Neural map applications p. 41
Backpropagation in non-feedforward networks p. 74
A PDP learning approach to natural language understanding p. 92
Learning capabilities of Boolean networks p. 117

The Logical Perspective
The logic of connectionist systems p. 133
A probabilistic logic neuron network for associative learning p. 156
Applications of N-tuple sampling and genetic algorithms to speech recognition p. 172
Dynamic Behavior of Boolean networks p. 217

Analysis and Interpretation
Statistical mechanics and neural networks p. 239
Digital neural networks, matched filters and optical implementations p. 258
Hetero-associative networks using link-enabling vs. link-disabling local modification rules p. 279
Generation of movement trajectories in primates and robots p. 305

The PDP Perspective
A review of parallel distributed processing p. 329
Bibliography p. 381
Index p. 394
