Injury-Induced Release of Excitatory Amino Acids

Excitatory Amino Acid Release Induced by Injury  p. 1

Excitatory Amino Acid Release after Focal Cerebral Ischaemia: Infarct Volume Determines EAA Release  p. 9

A Pyrimidine Derivative, BW 1003C87, Decreases Glutamate Release and Protects against Ischemic Damage  p. 15

Pilocarpine-Induced Activation of In Vivo Aspartate and Glutamate Release in Dorsal Hippocampus  p. 21

Temperature Dependence of Glutamate Release during Transient Ischaemia in the Gerbil and the Effect of Repeated Occlusions  p. 27

Ischemia-Induced Neurotransmitter Release: Effects of Mild Intraischemic Hyperthermia  p. 33

Glutamate Levels in Cerebrospinal Fluid: Do they Reflect In Vivo Modifications in Neurological Disorders?  p. 39

Glutamate, Aspartate and GABA Release from Hippocampal CA1 Slices during In Vitro Ischemia Is Calcium-Independent  p. 45

Glutamate Release and Calcium Influx Induced in Rat Neocortical Cultures by Reversal of the Transmembrane Sodium Gradient  p. 51

Topographical Dissociation of Calcium Accumulation following Hypoxic-Hypoglycemic Glutamate Release, NMDA Receptor Concentration and Delayed Neuronal Death in Gerbil Hippocampus  p. 57

The Role of Glutamatergic Receptor in Brain Injury

Dizocilpine (MK-801) in Cerebral Ischaemia  p. 63

Protection by Two Non-NMDA Antagonists, NBQX and GYKI 52466 against Selective Cell Loss following Transient Global Ischaemia (4VO) in the Rat  p. 71

Glutamate Neurotoxicity and Effect of Antagonists - In Vitro Study Using Hippocampal Neurons Exposed to Hypoxia  p. 77

Pharmacological Effects of Remacemide and MK-801 on Memory and Hippocampal CA1 Damage in the Rat Four-Vessel Occlusion (4-VO) Model of Global Ischemia  p. 83

Comparative Effects of Magnesium Chloride and MK-801 on Infarct Volume after MCA Occlusion in Fischer-344 Rats  p. 93

Generation and Propagation of Cortical Spreading Depression Is Mediated by the NMDA Receptor  p. 99

Effects of Ketamine on Recovery of Auditory Brainstem Response after Total Brain Ischemia  p. 105

The Role of Monoamines in Brain Injury

Role of Nigrostriatal Projections in the Vulnerability of the Striatum  p. 111

Noradrenergic Modulation of Excitotoxicity  p. 119

Effect of Injury on [alpha [subscript 1]]-Adrenoceptors in Rat Brain In Vivo  p. 125

Modulation of Brain Prostaglandin Synthesis by the Noradrenergic System  p. 131

Potential Role of 5-Hydroxytryptamine[subscript 1A] Receptors in Cerebral Ischemia  p. 137

Role of Serotonin in Traumatic Brain Injury: An Experimental Study in the Rat  p. 147

Measurement of Serotonin in Plasma by In Vivo Microdialysis during Photochemically Induced Thrombosis - Methodological Aspects  p. 153

The Vulnerability of Adult and Young Brain to Ischemia  p. 161

The Role of Steroids, Adenosine, GABA, and Acetylcholine in Brain Injury
The Role of Glucocorticoids in Ischemic Cell Death p. 167
Prevention of Hypoxic-Ischemic Damage in Neonatal Rat by Glucocorticoids p. 181
Effect of Cyclohexyladenosine on Ischemia-Induced Increases of Hippocampal Glutamate and Glycine p. 187
Adenosine Receptor Blockade Augments Interstitial Excitatory Amino Acids during Cerebral Ischemia p. 193
Metabolic Depression as a Possible Mechanism of Neuronal Protection by Adenosine p. 201
Dynamics of Ischemic Injury following Global Cerebral Ischemia in a Rat Cardiac Arrest Model p. 207
Muscarinic Receptor Blockade Reveals Changes in Cholinergic Function in Two Models of Traumatic Brain Injury (TBI) p. 213
Involvement of the Cholinergic System in the Effects of DM-9384 on Carbon Monoxide (CO)-Induced Acute and Delayed Amnesia p. 219
Intracellular Messengers and Brain Injury
Changes in Gene Expression after Transient Ischemia as Potential Markers for Excitotoxic Pathology p. 227
Correlation between Second-Messenger Activities and Cerebral Blood Flow in the Basal Ganglia and Hippocampus after Unilateral Carotid Artery Occlusion in Gerbils p. 233
Increased Phorbol Ester Binding and Decreased Forskolin Binding in Ischaemic Cortex after Subdural Haematoma in the Rat: An In Vitro Autoradiographic Study p. 241
Free Fatty Acid and Diacylglycerol Levels Are Related to Cerebral O$_2$ during Seizures p. 247
Traumatic Brain Injury Alters Cyclic AMP Second Messenger Systems in Rat Brain p. 253
Expression of Basic FGF in Periinfarcted Brain Tissue and Modification of Postischemic Thalamic Degeneration by Exogenous Basic FGF p. 259
Blood Brain Barrier in Brain Injury
The Blood-Brain Barrier in Brain Injury: An Overview p. 265
Ultrastructural Studies of Endothelium in NMDA-Induced Excitotoxicity p. 271
NMDA Receptors Mediate Activation of Polyamine Synthesis and Blood-Brain Barrier Breakdown after Cold Injury p. 279
Moderate Hypothermia Reduces Blood-Brain Barrier Disruption following Traumatic Brain Injury p. 285
Regional Blood to Brain Transport of Lactate p. 293
Delayed Blood-Brain Barrier Opening Was Induced Not by Presynaptic but by Postsynaptic Ischemic Neuronal Damages p. 299
Neurotransmitter Modulation of Cerebral Blood Flow and Metabolism
Neuroeffector Mechanisms during Focal and Global Cerebral Ischemia p. 305
Central Neural Modulation of Focal Cerebral Infarction: Possible Relationship to Brainstem Networks Governing Oxygen Conserving Responses p. 311
Effects of NMDA Antagonists and Temperature on Regional Cerebral Blood Flow p. 317
Reduced Latency of Visually Evoked Potentials following Cortical Injury Indicates Secondary Glutamatergic Neuronal Excitation p. 323
Pre- or Postsynaptic Blocking of Glutamatergic Functioning Prevents the Increase in Glucose Utilization following Concussive Brain Injury p. 327
