

Preface
Introduction
Why Study Statistics?
Modern Statistics
Statistics and Engineering
The Role of the Scientist and Engineer in Quality Improvement
A Case Study: Visually Inspecting Data to Improve Product Quality
Two Basic Concepts-Population and Sample
Organization and Description of Data
Pareto Diagrams and Dot Diagrams
Frequency Distributions
Graphs of Frequency Distributions
Stem-and-Leaf Displays
Descriptive Measures
Quartiles and Percentiles
The Calculation of \bar{x} and s
A Case Study: Problems with Aggregating Data
Probability
Sample Spaces and Events
Counting
Probability
The Axioms of Probability
Some Elementary Theorems
Conditional Probability
Bayes' Theorem
Probability Distributions
Random Variables
The Binomial Distribution
The Hypergeometric Distribution
The Mean and the Variance of a Probability Distribution
Chebyshev's Theorem
The Poisson Approximation to the Binomial Distribution
Poisson Processes
The Geometric and Negative Binomial Distribution
The Multinomial Distribution
Simulation
Probability Densities
Continuous Random Variables
The Normal Distribution
The Normal Approximation to the Binomial Distribution
Other Probability Densities

The Uniform Distribution
The Log-Normal Distribution
The Gamma Distribution
The Beta Distribution
The Weibull Distribution
Joint Distributions-Discrete and Continuous
Moment Generating Functions
Checking If the Data Are Normal
Transforming Observations to Near Normality
Simulation
Sampling Distributions
Populations and Samples
The Sampling Distribution of the Mean (ξ known)
The Sampling Distribution of the Mean (ξ unknown)
The Sampling Distribution of the Variance
Representations of the Normal Theory Distributions
The Moment Generating Function Method to Obtain Distributions
Transformation Methods to Obtain Distributions
Inferences Concerning a Mean
Point Estimation
Interval Estimation
Maximum Likelihood Estimation
Tests of Hypotheses
Null Hypotheses and Tests of Hypotheses
Hypotheses Concerning One Mean
The Relation between Tests and Confidence Intervals
Power, Sample Size, and Operating Characteristic Curves
Comparing Two Treatments
Experimental Designs for Comparing Two Treatments
Comparisons-Two Independent Large Samples
Comparisons-Two Independent Small Samples
Matched Pairs Comparisons
Design Issues-Randomization and Pairing
Inferences Concerning Variances
The Estimation of Variances
Hypotheses Concerning One Variance
Hypotheses Concerning Two Variances
Inferences Concerning Proportions
Estimation of Proportions
Hypotheses Concerning One Proportion
Hypotheses Concerning Several Proportions

Analysis of $r \times c$ Tables
Goodness of Fit
Regression Analysis
The Method of Least Squares
Inferences Based on the Least Squares Estimators
Curvilinear Regression
Multiple Regression
Checking the Adequacy of the Model
Correlation
Multiple Linear Regression (Matrix Notation)
Analysis of Variance
Some General Principles
Completely Randomized Designs
Randomized-Block Designs
Multiple Comparisons
Analysis of Covariance
Factorial Experimentation
Two-Factor Experiments
Multifactor Experiments
 2^n Factorial Experiments
The Graphic Presentation of 2^2 and 2^3 Experiments
Response Surface Analysis
Confounding in a 2^n Factorial Experiment
Fractional Replication
Nonparametric Tests
Introduction
The Sign Test
Rank-Sum Tests
Correlation Based on Ranks
Tests of Randomness
The Kolmogorov-Smirnov and Anderson-Darling Tests
The Statistical Content of Quality-Improvement Programs
Quality-Improvement Programs
Starting a Quality-Improvement Program
Experimental Designs for Quality
Quality Control
Control Charts for Measurements
Control Charts for Attributes
Tolerance Limits
Application to Reliability and Life Testing
Reliability

Failure-Time Distribution

The Exponential Model in Life Testing

The Weibull Model in Life Testing

Bibliography

Statistical Tables

Using the R Software Program

Answers to Odd-Numbered Exercises

Table of Contents provided by Blackwell's Book Services and R.R. Bowker. Used with permission.
