Model organization constraints in multi-agent system
A multi-agent system for mobile environments
Agent interaction management and application in a virtual collaborative environment

An integrated approach to battlefield situation assessment
Negotiation based on personality
MIAM: a robot oriented mobile intelligent agent model
Incorporating elements from CAMLE in the open repository
Representing human spatial behavior by self-organizing networks
Multi-agent system development kit
Limitations in AUML's roles specification
The research of geometric constraint solving
Based on the path tracking homotopy iteration method
Fast stereo matching method using edge traction
Hybrid color image segmentation based fully
Automatic chromakeying system with cluttered background
Research on techniques of approximate recognition of continuous deformation of images with multi-grey-levels
Improvements on CCA model with application to face recognition
