Foreword
Organizing Institutions
Contributing Authors
Toward a Mathematical Theory of Aeroelasticity
Uniform Cusp Property, Boundary Integral, and Compactness for Shape Optimization
Interior and Boundary Stabilization of Navier-Stokes Equations
Feedback Robust Control for a Parabolic Variational Inequality
Tracking Control of Parabolic Systems-Modeling of Topology Variations in Elasticity

Factorization by Invariant Embedding of Elliptic Problems in a Circular Domain
On Identifiability of Linear Infinite-Dimensional Systems
An Inverse Problem For the Telegraph Equation Solvability and Numerical Solution of Variational Data Assimilation Problems
Existence of Solutions to Evolution Second Order Hemivariational Inequalities with Multivalued Damping
Probabilistic Investigation on Dynamic Response of Deck Slabs of Highway Bridges
Optimal Maintenance for Bridge Considering Earthquake Effects
Uniform Decay Rates of Solutions to a Nonlinear Wave Equation with Boundary Condition of Memory Type
Bayesian Deconvolution of Functions in RKHS using MCMC Techniques
Modeling Stochastic Hybrid Systems
Mathematical Models and State Observation of the Glucose-Insulin Homeostasis
Convergence Estimates of POD-Galerkin Methods for Parabolic Problems
