Patterns of Living and Non-living Components of Old Fields After Abandonment

Introduction

Trends in Above and Belowground Carbon with Forest Regrowth After Agricultural Abandonment in the Neotropics

Post Sugar Cane Succession in Moist Alluvial Sites in Puerto Rico

Soil Fungi and Macrofauna in the Neotropics

Earthworms and Post-Agricultural Succession

Mechanisms and Tolerances that Cause Plant-Plant Replacements Producing Old Field Vegetation Patterns

Factors Affecting the Species Richness and Composition of Neotropical Secondary Succession: A Case Study of Abandoned Agricultural Land in Panama

Seed Dispersal by Cattle: Natural History and Applications to Neotropical Forest Restoration and Agroforestry

The Roles of Disperser Behavior and Physical Habitat Structure in Regeneration of Post-Agricultural Fields

Neotropic Post-Dispersal Seed Predation

Facilitation Versus Competition in Neotropical Old-Fields: A Case Study After Pinus taeda Cultivation in Brazil

Recruitment of Dry Forest Tree Species in Central Brazil Pastures

Restoration, Management, and the Future of Post-Agricultural Areas

Microbial Biomass in Native Amazonian Ecosystems and Its Adaptation to Deforestation and Pasture Introduction and Management

Management for Sustainability and Restoration of Degraded Pastures in the Neotropics

Conclusions, Synthesis, and Future Directions
