RNA Virus Populations as Quasispecies
Genetic Recombination in RNA Viruses
Foot-and-Mouth Disease Virus Populations Are Quasispecies
Genetic Diversity and Rapid Evolution of Poliovirus in Human Hosts
Mutations and A/I Hypermutations in Measles Virus Persistent Infections
Evolutionary Processes in Influenza Viruses: Divergence, Rapid Evolution, and Stasis
Genetic Diversity and Slow Rates of Evolution in New World Alphaviruses
Emergence and Transmission of Influenza A Viruses Resistant to Amantadine and Rimantadine
Selection of Zidovudine-Resistant Variants of Human Immunodeficiency Virus by Therapy
Genetic Diversity and Evolution of Retroviruses
Retroviral Reverse Transcriptases: Error Frequencies and Mutagenesis
Human Immunodeficiency Virus Type 1 Quasispecies In Vivo and Ex Vivo
Tracing the Origin of Retroviruses
Replication and Evolution of Viroid-Like Pathogens
