Progress in Multi-dimensional Upwind Differencing p. 1
The Impact of Turbulence Modelling on the Numerical Predictions of Flows p. 27
Domain Decomposition Methods with Applications to Fluid Dynamics p. 47
Unstructured Mesh Algorithms for Aerodynamic Calculations p. 57
Fluid Flow Visualization: Recent Developments and Future Directions p. 78
A Multi-Dimensional Solution Adaptive Multigrid Solver for the Euler Equations p. 90
A Multi-Dimensional Upwind Scheme for the Euler Equations p. 95
On a Method to Construct Godunov-Type Schemes p. 100
3-Dimensional Upwind Euler Solver Using Kinetic Flux Vector Splitting Method p. 105
Monotone, Higher-Order Accurate, Multi-Dimensional Upwinding p. 110
On a New Class of Flux Splittings p. 115
A Second-Order Multidimensional Sequel to Godunov's Method p. 120
Preconditioning and Flux Vector Splitting for Compressible Low Mach Number Flow p. 125
A Three-Dimensional Pressure Flux-Split RNS Formulation: Application to Subsonic/Supersonic Flows in Inlets and Ducts p. 130
An Improved Wave Model for Multidimensional Upwinding of the Euler Equations p. 135
GC-FCT: A Fully Multidimensional FCT Algorithm for General Curvilinear Coordinates p. 140
Direct Numerical Simulation of the Three-Dimensional Breakdown to Turbulence in Compressible Boundary Layers p. 145
The Nonlinear Galerkin Method Applied to the Simulation of Turbulence in a Channel Flow p. 150
Unsteady and Transitional Separated Fluid Flows - Direct Simulation p. 155
Spatial Simulation of Boundary-Layer Transition Mechanisms p. 160
Vortical Structures and Turbulent Phenomena in a Piston-Engine Model p. 165
Prediction of Turbulent Lee-Side Vortex Flow p. 170
Modelling Shock/Turbulent-Boundary-Layer Interaction with Second-Moment Closure Within a Pressure-Velocity Strategy p. 175
Solution of Compressible, Turbulent Transport Equations Using a Flux-Difference Split Scheme p. 180
Direct Numerical Simulation of Laminar Breakdown in High-Speed, Axisymmetric Boundary Layers p. 185
Direct Numerical Simulation of Compressible Turbulence in a Homogeneous Shear Flow p. 190
Numerical Investigation of Turbulent Flow in Boundary Layer at Different Reynolds Numbers p. 195
Simulation of Instabilities in a Boundary Layer with a Roughness Element p. 205
Transonic and Supersonic Flow Calculations Around Aircraft Using a Multidomain Euler Code p. 210
Simulation of 2D External Incompressible Viscous Flows by Means of a Domain Decomposition Method p. 215
Domain Decomposition Combined with Adaptive Remeshing for Problems of Transient Compressible Flow p. 220
A Numerical Procedure to Solve Viscous Flow Around Arbitrarily Moving Bodies p. 225
An Unstructured Multi-Block Local Grid Refinement Solver for the 3-D Euler Equations and its Implementation on Distributed Memory Computers

A Second-Order TVD Method for the Solution of the 3D Euler and Navier-Stokes Equations on Adaptively Refined Meshes

A 3-D Least-Squares Upwind Euler Solver for Unstructured Meshes

Discontinuous Finite Element Euler Solutions on Unstructured Adaptive Grids

High-Resolution Schemes and Unstructured Grids in Transient Shocked Flow Simulation

Validation of an Unstructured Euler Code for the Simulation of Transonic Flows Past a Complete Aircraft

Semi-Unstructured Prismatic Grid Generation for Aircraft Configurations

Block Full Multigrid Adaptive Scheme for the Compressible Euler Equations

Incompressible Navier-Stokes Solutions on Unstructured Grids Using a Covolume Technique

Delannay Based Triangulations for the Navier-Stokes Equations with Minimum User Input

External Viscous Flow Computations Using Prismatic Grid

Unstructured Grid Generation by Advancing Front Method Using Structured Background Grids

A Multigrid Finite Volume Method Based on Multistage Jacobi Relaxation for Steady Euler Equations on Adaptive Unstructured Grids

Adaptivity Techniques for the Computation of Two-Dimensional Viscous Flows Using Structured Meshes

Performance Assessment of an Adaptive Mesh Refinement Technique for Detonation Waves

An Evaluation of Turbulent Heat Transfer Predictions

Kinetic Flux-Splitting Schemes for Hypersonic Flows

Numerical Simulation of Supersonic Mixing Layers Using a Fourth-Order Accurate Shock Capturing Scheme

Truly Two-Dimensional Algorithms for Radiative Nonequilibrium Flows

Development and Validation of a High Resolution Shock-Capturing Scheme for Nonequilibrium Hypersonic Flows

Nonequilibrium, Chemically Reacting Flowfields and the Implicit-Explicit Godunov Scheme

An Upwind Scheme for Oblique Shock/Boundary Layer Interaction in a Supersonic Inlet

Calculation of a Viscous Hypersonic Nozzle Flow by a Second Order Implicit Scheme on Unstructured Meshes

Shock-Boundary Layer Interaction by Shock Fitting

Numerical Simulation of Supersonic Mixing Layer Using a Solution Adaptive Finite-Element Flux-Corrected Transport Scheme

Numerical Solution of Hypersonic Real Gas Flows Using Method of Lines

Nozzle Flow Calculations with Gas Injections Using Inviscid and Viscous Approaches

A Godunov-Type Scheme Using Streamline Meshes for Steady Supersonic Aerodynamics

A CFD-Based Approach for the Solution of Acoustics, Maxwell and Schroedinger Equations for Scattering Problems
2-D Studies of the Multi-Wavelength Planar and Spherical Rayleigh-Taylor Instability with an Automatically Rezoned Lagrangian Code  
Mixed-Convection of Rotating Fluids in Spherical Annuli  
A Comparison of Several Implicit Residual Smoothing Methods in Combination with Multigrid  
The Computation of Highly Nonlinear Free Surface Waves with a Three-Dimensional Panel Method  
A Brief Description of a New Numerical Framework for Solving Conservation Laws - The Method of Space-Time Conservation Element and Solution Element  
Computation of Airfoil and Cascade Flows Using the Clebsch Decomposition Method  
Solutions of the Vorticity Transport Equation at High Reynolds Numbers  
Magnetically Driven Flow in an Annulus  
Multiblock Navier-Stokes Method to Simulate Turbulent Transonic Flow over a Delta-Wing  
Quasigasdynamic Equations and Computer Simulation of Viscous Gas Flows  
Effects of Angle of Attack on the Leading Edge Attachment Line  
Finite Element Simulation of Transonic Flows with Shock Waves  
Navier-Stokes Analysis and Experimental Data Comparison of Compressible Flow Within Ducts  
Multidisciplinary Computational Aerosciences  
Numerical Methods for Simulating Unsteady Incompressible Flows  
Time-Marching Computations in the Complete Mach/Reynolds Number Domain  
Numerical Investigation of a Double-Periodic Compressible Multi-Vortex-Field  
A Direct Implicit Methodology for the Simulation of the Rapid Pitch-Up of an Airfoil with and Without Leading-Edge Flow Control  
The Solution of 3D Inviscid Flow Using a Finite Element Multigrid Procedure  
Eulerian-Eulerian and Eulerian-Lagrangian Methods in Two Phase Flow  
Numerical Study of the Close-Coupled Canard-Wing-Body Aerodynamic Interaction  
Asymptotic Far-Field Boundary Conditions for Numerical Flowfield Predictions  
Numerical Simulation of Inviscid and Viscous Flow with High Order Accurate Schemes  
Solution of Three-Dimensional Navier-Stokes Equations Using an Implicit Gauss-Seidel Scheme  
Transonic Wing Analysis and Design Using Navier-Stokes Equations  
A Second Order Method for the Finite Element Solution of the Euler and Navier-Stokes Equations  
Implementation of Cell-Vertex Schemes on a Massively Parallel Computer  
A Consistent Cell Vertex Finite Volume Method for the Compressible Navier-Stokes Equations  
Remark on Numerical Simulation of 2D Unsteady Transonic Flows  
Development and Applications of a 3D Compressible Navier-Stokes Solver  
Numerical Simulation of Three-Dimensional Vortex Flows over Delta Wing Configurations
