Mathematical Modeling for Vision and Graphics
Area Guide Map Modeling by Manifolds and CW-complexes p. 5
The Elementary Equation of the Conjugate Transformation for the Hexagonal Grid p. 21
Generating Views of 3D Objects from Viewer-Centered Representations p. 43
Modeling with Constraints
A System for Constructive Constraint-based Modelling p. 61
Constrained Optimization in Surface Design p. 85
Adaptive Range Data Approximation by Constrained Surface Triangulation p. 95
Collinearity Constraints on Geometric Figures p. 115
Modeling of Dynamic Objects
Animation of Interacting Objects with Collisions and Prolonged Contacts p. 129
Hexadecimal-Tree: A Time-Continuous 4D Interference Check Method p. 143
Precise Object Interactions using Solid Modeling Techniques p. 157
On the Spherical Splines for Robot Modeling p. 177
Geometric Modeling
Different Combinatorial Models based on the Map Concept for the Representation of Subsets of Cellular Complexes p. 193
A Scheme for Single Instance Representation in Hierarchical Assembly Graphs p. 213
Towards the Integration of Solid and Surface Modeling by Means of Pseudo-Boolean Operators p. 225
Surface Modeling as a Creative Tool
Interactive Axial Deformations p. 241
Surface Generation from an Irregular Network of Parametric Curves p. 255
Hybrid Symbolic and Numeric Operators as Tools for Analysis of Freeform Surfaces p. 275
Curve and Surface Modeling
Smooth Surface Interpolation with Bézier Surfaces Having Rational Bézier Points p. 289
Curvature Continuous Blend Surfaces p. 309
Filling N-sided Holes p. 319
Finite Representations of Real Parametric Curves and Surfaces p. 347
Interproximation Using Cubic B-spline Curves p. 359
Modeling for Animation
Animated Parameter Space p. 379
Modelling Facial Communication Between an Animator and a Synthetic Actor in Real Time p. 387
Synthesis and Animation of Human Faces: Artificial Reality in Interpersonal Video Communication p. 397
Modeling for CIM Applications
Reasoning about Physical Solids and Processes p. 411
Integration of Design by Features and Feature Recognition Approaches through a Unified Model p. 423
Modeling for Rendering Complex Objects
Modeling in Volume Graphics p. 441
Multi-Resolution 3D Approximations for Rendering Complex Scenes p. 455
