The impact of granularity in abstract interpretation of Prolog p. 1
Optimization techniques for general purpose fixpoint algorithms: practical efficiency for the abstract interpretation of Prolog p. 15
Chaotic fixpoint iteration guided by dynamic dependency p. 27
Fast abstract interpretation using sequential algorithms p. 45
Abstract interpretation and verification of reactive systems p. 60
Semantics and analysis of Linda-based languages p. 72
Compiling FX on the CM-2 p. 87
Combining dependability with architectural adaptability by means of the SIGNAL language p. 99
Challenges in developing useful and practical static analysis for logic programs p. 111
Occam's razor in metacomputation: the notion of a perfect process tree p. 112
Tupling functions with multiple recursion parameters p. 124
Avoiding repeated tests in pattern matching p. 141
Freeness, sharing, linearity and correctness - all at once p. 153
Synthesis of directionality information for functional logic programs p. 165
Abstract rewriting p. 178
Reflections on program optimization p. 193
Finiteness conditions for strictness analysis p. 194
Strictness properties of lazy algebraic datatypes p. 206
Minimal thunkification p. 218
An efficient abductive reasoning system based on program analysis p. 230
A congruence for Gamma programs p. 242
Usage analysis with natural reduction types p. 254
Polymorphic types and widening operators p. 267
Demonstration: static analysis of AKL p. 282
