Theory of Domains and Nearby
Predicative Programming - A Survey
A Three-Valued Logic for Refinement
A Compositional Semantics of Combining Forms for Gamma Programs
Algebraic Properties of Loop Invariants
An Approach to Parameterized First-Order Specifications: Semantics, Correctness, Parameter Passing
Algebraic Modelling of Imperative Languages with Pointers
Galois Connection Based Abstract Interpretations for Strictness Analysis
Efficient Chaotic Iteration Strategies with Widenings
Semantic Analysis of Interval Congruences
Polymorphic Typing for Call-By-Name Semantics
Logic Program Testing Based on Abstract Interpretation
Analysis of Some Semantic Properties for Programs of the Applicative Language AL
Communication as Unification in Process Algebras: Operational Semantics
Functional Development of Massively Parallel Programs
Observing Some Properties of Event Structures
The Other Linear Logic
Duration Calculi: An Overview
A Unique Formalism for Specifying and Designing Objects in a Parallel Environment
On the Smooth Calculation of Relational Recursive Expressions out of First-Order Non-Constructive Specifications Involving Quantifiers
Saturation Replaces Induction for a Miniscoped Linear Temporal Logic
A Formal Approach to Requirements Engineering
A Two-Phase Approach to Reverse Engineering Using Formal Methods
Algebraically Provable Specification of Optimized Compilations
Formal Derivation of an Error-Detecting Distributed Data Scheduler Using Changeling
Algebraic Calculation of Graph and Sorting Algorithms
Automatical Synthesis of Programs with Recursions
Parsing in ISBES
