Early Experiences with Olden p. 1
Arbitrary Order Operations on Trees p. 21
Analysis of Dynamic Structures for Efficient Parallel Execution p. 37
On Automatic Data Structure Selection and Code Generation for Sparse Computations p. 57
Synchronization Issues in Data-Parallel Languages p. 76
ZPL: An Array Sublanguage p. 96
Event-Based Composition of Concurrent Programs p. 115
Adaptive Parallelism on Multiprocessors: Preliminary Experience with Piranha on the CM-5 p. 139
Slicing Analysis and Indirect Accesses to Distributed Arrays p. 152
DoandMerge: Integrating Parallel Loops and Reductions p. 169
Automatic Support for Data Distribution on Distributed Memory Multiprocessor Systems p. 184
A Compilation Approach for Fortran 90D/HPF Compilers p. 200
A Framework for Exploiting Data Availability to Optimize Communication p. 216
The Alignment-Distribution Graph p. 234
An Overview of a Compiler for Scalable Parallel Machines p. 253
Toward a Compile-Time Methodology for Reducing False Sharing and Communication Traffic in Shared Virtual Memory Systems p. 273
Program Transformation for Locality Using Affinity Regions p. 301
Maximizing Loop Parallelism and Improving Data Locality via Loop Fusion and Distribution p. 321
Align and Distribute-based Linear Loop Transformations p. 340
Extending Software Pipelining Techniques for Scheduling Nested Loops p. 358
A Methodology for Generating Efficient Disk-Based Algorithms from Tensor Product Formulas p. 374
Loop Transformations for Prolog Programs p. 390
A Multithreaded Implementation of Id using P-RISC Graphs p. 406
Acceleration of First and Higher Order Recurrences on Processors with Instruction Level Parallelism p. 430
Efficient Compile-Time/Run-Time Contraction of Fine Grain Data Parallel Codes p. 449
VISTA: The Visual Interface for Scheduling Transformations and Analysis p. 461
Efficiently Computing [phi]-Nodes On-The-Fly p. 477
Construction of Thinned Gated Single-Assignment Form p. 500
Automatic Array Privatization p. 522
FIAT: A Framework for Interprocedural Analysis and Transformations p. 546
An Exact Method for Analysis of Value-based Array Data Dependences p. 567
Symbolic Analysis: A Basis for Parallelization, Optimization, and Scheduling of Programs p. 586
Towards a Non-intrusive Approach for Monitoring Distributed Computations through Perturbation Analysis p. 586
Efficient Computation of Precedence Information in Parallel Programs p. 602
Trace Size vs. Parallelism in Trace-and-Replay Debugging of Shared-Memory Programs p. 617
