The crisis in finite mathematics: Automated reasoning as cause and cure p. 1
A divergence critic p. 14
Synthesis of induction orderings for existence proofs p. 29
Lazy generation of induction hypotheses p. 42
The search efficiency of theorem proving strategies p. 57
A method for building models automatically: Experiments with an extension of OTTER p. 72
Model elimination without contrapositives p. 87
Induction using term orderings p. 102
Mechanizable inductive proofs for a class of [actual symbol not reproducible] formulas p. 118
On the connection between narrowing and proof by consistency p. 133
A fixedpoint approach to implementing (co)inductive definitions p. 148
On notions of inductive validity for first-order equational clauses p. 162
A new application for explanation-based generalisation within automated deduction p. 177

Semantically guided first-order theorem proving using hyper-linking p. 192
The applicability of logic program analysis and transformation to theorem proving p. 207

Detecting non-provable goals p. 222
A mechanically proof-checked encyclopedia of mathematics: Should we build one? Can we? p. 237
The TPTP problem library p. 252
Combination techniques for non-disjoint equational theories p. 267
Primal grammars and unification modulo a binary clause p. 282
Conservative query normalization on parallel circumscription p. 296
Bottom-up evaluation of datalog programs with arithmetic constraints p. 311
On intuitionistic query answering in description bases p. 326
Deductive composition of astronomical software from subroutine libraries p. 341
Proof script pragmatics in IMPS p. 356
A mechanization of strong Kleene logic for partial functions p. 371
Algebraic factoring and geometry theorem proving p. 386
Mechanically proving geometry theorems using a combination of Wu's method and Collins' method p. 401
Strive and integers p. 416
What is a proof? p. 431
Termination, geometry and invariants p. 432
Ordered chaining for total orderings p. 435
Simple termination revisited p. 451
Termination orderings for rippling p. 466
A novel asynchronous parallelism scheme for first-order logic p. 484
Proving with BDDs and control of information p. 499
Extended path-indexing p. 514
Exporting and reflecting abstract metamathematics p. 529
Associative-Commutative deduction with constraints p. 530
AC-superposition with constraints: No AC-unifiers needed p. 545
The complexity of counting problems in equational matching p. 560
Representing proof transformations for program optimization p. 575
Exploring abstract algebra in constructive type theory p. 590
Tactic theorem proving with refinement-tree proofs and metavariables p. 605
Unification in an extensional lambda calculus with ordered function sorts and constant overloading p. 620
Decidable higher-order unification problems p. 635
Theory and practice of minimal modular higher-order E-unification p. 650
A refined version of general E-unification p. 665
A completion-based method for mixed universal and rigid E-unification p. 678
On pot, pans and pudding or how to discover generalised critical pairs p. 693
Semantic tableaux with ordering restrictions p. 708
Strongly analytic tableaux for normal modal logics p. 723
Reconstructing proofs at the assertion level p. 738
Problems on the generation of finite models p. 753
Combining symbolic computation and theorem proving: Some problems of Ramanujan p. 758
SCOTT: Semantically constrained OTTER p. 764
PROTEIN: A PROver with a Theory Extension INterface p. 769
DELTA - A bottom-up preprocessor for top-down theorem provers p. 774
SETHEO V3.2: Recent developments p. 778
KoMeT p. 783
[Omega]-MKRP: A proof development environment p. 788
leanTAP: Lean tableau-based theorem proving p. 793
INDER: Finite domain enumerator p. 798
Symlog: Automated advice in Fitch-style proof construction p. 802
KEIM: A toolkit for automated deduction p. 807
Elf: A meta-language for deductive systems p. 811
EUODHILOS-II on top of GNU Epoch p. 816
Pi: An interactive derivation editor for the calculus of partial inductive definitions p. 821
Mollusc: A general proof-development shell for sequent-based logics p. 826
KITP-93: An automated inference system for program analysis p. 831
SPIKE: A system for sufficient completeness and parameterized inductive proofs p. 836
Distributed theorem proving by Peers p. 841
Author index p. 847
