Editors' Introduction

From cognitive theory to educational technology

Toward the integration of computers in powerful learning environment

Learning with computer-based exploratory environments in science and mathematics

Modelling, a means for expressing thinking: ESRC Tools for exploratory learning research programme

Knowledge application in complex systems

Internalization and Learning Environments

Learning: From interactivity to cooperation

Peer interactions among adolescents using computer networks in an international role playing exercise

Implementing a model of cognitive development in an intelligent learning environment

Differences in patterns: Studying computer enhanced learning environments

Multimedia environments for enhancing science instruction

The Mars Mission Challenge: A generative problem-solving school science environment

Studying and teaching model-based reasoning in science

Promoting studies on conceptual change

Diagnosing students' physics knowledge and remediating learning difficulties: A computer-based approach

Development of a learning environment for basic electricity

Development of an information system to help conceptual change concerning the human nervous system

Analysis of physics knowledge for learning environments

Integrating computer software tools in learning environments for meaningful learning

Ecoland: A hypermedia prototype for environmental education

Multimedia environments for enhancing student learning in mathematics

Tutoring mathematical text problems: From cognitive task analysis to didactic tools

Less can be more: Unintelligent tutoring based on psychological theories and experimentation

The use of an intermediate model for solving word problems

Qualitative analysis of children's learning of programming in the context of a developing culture of open-ended project work in a primary school

Computer-assisted learning to read and write: A three-year longitudinal study

Computer facilitations of the writing process

Flow driven English course

Investigating the use of knowledge profiles in a flexible learning environment:

Analyzing students' prior knowledge states

Knowledge and learning skill student model

Semantic networks of action

Representation systems in mathematics and science: The era of computers

Use of graphics in computer aided learning in chemistry
Effects of visible link-types on learning in hypertext systems  p. 276
Knowledge construction and acquisition in a hypermedia environment customized for learning purposes  p. 283
Hypertext learning environments and epistemic beliefs: A preliminary investigation  p. 290
Investigating motivation and cooperation in computer-assisted learning: A pilot study  p. 296
