Introduction

Sarcolemma and phosphodiesterases

Receptor systems in the nonfailing human heart

Changes in the receptor-G protein-adenyl cyclase system in heart failure from various types of heart muscle disease

Quantification of [actual symbols not reproducible]-proteins in the failing and nonfailing human myocardium

Regulation and possible functional implications of G-protein mRNA expression in nonfailing and failing ventricular myocardium

Phosphodiesterase inhibition and positive inotropy in failing human myocardium

Cardiovascular cyclic nucleotide phosphodiesterases and their role in regulating cardiovascular function

Na, K-ATPase expression in normal and failing human left ventricle

Excitation-contraction coupling and contractile proteins

Structural and functional diversity of human ventricular myosin

Contractile protein function in failing and nonfailing human myocardium

Troponin T isoform expression in the normal and failing human left ventricle: A correlation with myofibrillar ATPase activity

Effects of different expression and posttranslational modifications of myosin light chains on contractility of skinned human cardiac fibers

Responsiveness of the myofilaments to [actual symbols not reproducible] in human heart failure: Implications for [actual symbols not reproducible] and force regulation

The regulation of the human [beta] myosin heavy-chain gene

Mutations in cardiac myosin heavy-chain genes cause familial hypertrophic cardiomyopathy

The membrane proteins of the overloaded and senescent heart

Contraction frequency dependence of twitch and diastolic tension in human dilated cardiomyopathy

Alterations of the force-frequency relationship in the failing human heart depend on the underlying cardiac disease

Pathophysiology of cardiac hypertrophy and failure of human working myocardium: Abnormalities in calcium handling

[actual symbols not reproducible]-currents and intracellular [actual symbols not reproducible]-transients in single ventricular myocytes isolated from terminally failing human myocardium

Dynamic calcium requirements for activation of human ventricular muscle calculated from tension-independent heat

The calcium-release channel from cardiac sarcoplasmic reticulum: Function in the failing and acutely ischaemic heart

Immune-mediated modulation of sarcoplasmic reticulum function in human dilated cardiomyopathy

Calcium uptake by sarcoplasmic reticulum and its modulation by cAMP-dependent phosphorylation in normal and failing human myocardium

Contractile proteins and sarcoplasmic reticulum calcium-ATPase gene expression in the hypertrophied and failing heart

Extracellular matrix

Factors associated with reactive and reparative fibrosis of the myocardium
The extracellular matrix in the failing human heart  
Mitochondrial function  
Dysfunction of the ADP/ATP carrier as a causative factor for the disturbance of the myocardial energy metabolism in dilated cardiomyopathy  
Adenine nucleotide metabolism and contractile dysfunction in heart failure--Biochemical aspects, animal experiments, and human studies  
Achievements of the Symposium  
Cellular and molecular alterations in the failing human heart  
Subject index
