Neurobehavior

The neonatal behavioral assessment scale as a biomarker of the effects of environmental agents on the newborn p. 21

Behavioral assessment scales: the NICU network neurobehavioral scale, the neonatal behavioral assessment scale, and the assessment of the preterm infant’s behavior p. 29

Kicking coordination captures differences between full-term and premature infants with white matter disorder p. 44

Late dose-response effects of prenatal cocaine exposure on newborn neurobehavioral performance p. 65

Similar and functionally typical kinematic reaching parameters in 7- and 15-month-old in utero cocaine-exposed and unexposed infants p. 80

Culture

Introduction: cross-cultural studies of development p. 95

The role of culture in brain organization, child development, and parenting p. 97

Multiple caretaking in the context of human evolution: why don’t the Efe know the western prescription for child care? p. 102

The manta pouch: a regulatory system for Peruvian infants at high altitude p. 123

Mother-infant interaction among the Gusii of Kenya p. 134

Infant social-emotional interaction

Interactive mismatch and repair: challenges to the coping infant p. 155

Emotions and emotional communication in infants p. 164

The mutual regulation model: the infant’s self and interactive regulation and coping and defensive capacities p. 177

Infant-mother face-to-face interaction: age and gender differences in coordination and the occurrence of miscoordination p. 195

The transfer of affect between mothers and infants p. 206

Mother-infant face-to-face interaction: influence is bidirectional and unrelated to periodic cycles in either partner’s behavior p. 218

Beyond the pace: an empirical study of infant affective configurations of facial, vocal, gestural, and regulatory behaviors p. 230

Perturbations: natural and experimental

The primacy of social skills in infancy p. 249

The infant’s response to entrapment between contradictory messages in face-to-face interaction p. 262

Depressed mothers and infants: the failure to form dyadic states of consciousness p. 274

Specificity of infants’ response to mothers’ affective behavior p. 293

The impact of maternal psychiatric illness on infant development p. 305

Making up is hard to do, especially for mothers with high levels of depressive symptoms and their infant sons p. 319

Gender differences and their relation to maternal depression p. 339

Infant moods and the chronicity of depressive symptoms: the cocreation of unique ways of being together for good or ill, paper 1: the normal process of development and the formation of moods p. 348
Infant moods and the chronicity of depressive symptoms: the cocreation of unique ways of being together for good or ill, paper 2: the formation of negative moods in infants and children of depressed mothers

The stress of normal development and interaction leads to the development of resilience and variation in resilience

Dyadic expansion of consciousness and meaning making

Infant responses to impending collision: optical and real

Dyadically expanded states of consciousness and the process of therapeutic change

Implicit relational knowing: its role in development and psychoanalytic treatment

Noninterpretive mechanisms in psychoanalytic therapy: the "something more" than interpretation

Emotional connections and dyadic consciousness in infant-mother and patient-therapist interactions: commentary on a paper by Frank Lachmann

A model of infant mood states and Sandarian affective waves

"Of course all relationships are unique": how cocreative processes generate unique mother-infant and patient-therapist relationships and change other relationships

Why is connection with others so critical?: the formation of dyadic states of consciousness and the expansion of individuals' states of consciousness

Contributions to understanding therapeutic change: now we have a playground
