Preface
Is there a wearable computer in your future? p. 3
A structured video browsing tool p. 17
Vision for man machine interaction p. 28
Exploring terra incognita in the design space of query devices p. 49
Escaping the event loop: an alternative control structure for multithreaded GUIs p. 69
An interactive environment based on a task model p. 88
The integration of a layout constraint language with an object-oriented user interface management system p. 103
Declarative interface models for user interface construction tools: the MASTERMIND approach p. 120
HandMove: a system for creating animated user interface components by direct manipulation p. 151
Systematic methods for user interface design p. 169
Validating interactive system design through the verification of formal task and system models p. 189
Formal verification of undesired behaviours in the CERD case study p. 213
Adding user interface to a behavioural specification p. 227
Multiuser architectures p. 247
Multiuser interface architecture using structured distributed shared memories p. 271
A software engineering view of user interface design p. 293
Systematic creativity: a methodology for integrating user, market and engineering requirements for product definition, design and usability testing p. 307
Scenarios for CSCW systems p. 333
Using the human context in interactive systems development p. 339
Is usability testing for specialists only? p. 348
How to make formal methods useful p. 358
Revisiting the Denver model for groupware design p. 363
Index of contributors p. 371
Keyword index p. 372
