Preface

Committees

Mobile communication traffic analysis on a road systems model  
Deriving the tail distribution of the buffer contents in a statistical multiplexer with general heterogeneous on/off sources  
Tail probability of a Gaussian fluid queue under finite measurement of input processes

Delay and overflow of discrete-time priority queue with burst arrivals and partial buffer sharing  
Measuring ATM traffic cell-by-cell: experiences and preliminary findings from BAGNet  
A discrete-time ATM traffic model with long range dependence characteristics  
Bottlenecks on the way towards fractal characterization of network traffic: estimation and interpretation of the Hurst parameter  
A workload characterization methodology for WWW applications  
Performance study of shared-nothing parallel transaction processing systems  
High-speed free-space laser communication  
A survey of wireless ATM MAC protocols  
Two-class priority queueing system with time-limited schedule  
Waiting time distributions in a two-queue model with mixed exhaustive and gated-type K-limited services  
Gated time-limited polling systems  
Realizing quality of service guarantees in multiservice networks  
Measurement-based CAC for video applications using SBR service  
A source independent traffic model for ATM networks  
Resource allocations protocols impact on MPEG sequence quality  
The round-robin service discipline in discrete time for phase-type distributed packet-lengths  
An M/M/c queue with interdependent arrival and service processes  
Index of contributors
