Hydrodynamics of high speed marine vehicles
Liquefaction around marine structures, LIMAS, an EU research program
Pentamaran hull for medium size fast ferries
Motions and added resistance of multihull marine vehicles at high speed: numerical and
experimental results
Experimental evaluation of high performance rudder enhanced by Coanda effect for VLCCs at low speed operation
On the roll reduction by using a hydrodynamic model with rudder control
Hydrodynamic performance of marine propeller in cavitating flow
A generalized propeller blade design method based on NURBS
A numerical calculation of wave pattern generated by a seagoing ship
Fast evaluation of ship responses in waves
RANS computations of hydrodynamic forces and moments acting on a submarine
An experimental study on the design of skeg for barge type stern form
Wave resistance of a boxlike ship by a modified Dawson's method
Speed effects on the motions of high-speed crafts
Evaluation of resistance performance of a power boat using unmanned high-speed towing carriage
Fundamental investigation on wave making interactions around multi-hull vessel
Experimental and numerical study of shipping water impact on running ship foredeck in regular head seas
Validation of 2.5D sea-keeping prediction method
Double-frequency wave force and moment on a body moving forward in steep regular waves
A unified approach to ship seakeeping and manoeuvering using a RANSE method
Evaluation of propulsive performance of a tanker in damaged conditions
Bowflare and stern slamming induced whipping of large ships
A comparative study of 3-D methods with experimental results for seakeeping analysis
Sloshing simulation of viscous liquid coupled with elastic structures
Transverse waves in a channel with decreasing width
Evaluation of cost function in wave data assimilation with WAM
Numerical simulation of wave attenuation over porous seabeds
Behaviour of suspended sediment in a shallow tidal estuary
Testing of CEM wave prediction model for Lake Ontario
Multigrain coastal sedimentation model and its Terschelling beach application
The numerical simulation of local scour around a large cylinder due to wave-current action
Bragg reflection of water waves with currents
The depth-dependent radiation stresses and their effect on coastal currents
Hydraulic efficiencies of non-wave overtopping type seawall installed on a mound
A numerical model for low-frequency harbor oscillation induced by wave group deformation
Field measurements on morphological change and tidal exchange in a mangrove estuary p. 267

Modeling of beach erosion and sediment transport under storm condition p. 273
Pipeline floatation in liquefied soils under waves p. 279
Numerical simulation of fully nonlinear wave propagation p. 287
Wetting and drying scheme for POM and its applications to San Francisco Bay p. 293
Hydrodynamics of a perforated circular caisson and suction pipe of a seawater intake structure p. 301
The shapes of large surface waves on the open sea p. 309
Investigation on model law of air bubbles breakwater p. 319
Variability on velocity structures due to internal waves near the mouth of Mutsu Bay p. 325

Numerical solutions of unsteady wave-making problems using a panel method in time-domain p. 333
Numerical modeling for breaking wave-induced momentary liquefaction in a porous seabed: case study at Gold Coast p. 339
Measured and computed results of wave drift added mass of a vertical circular cylinder or an array of vertical circular cylinders p. 349
Three-dimensional analysis of slamming p. 357
Towards hydro-elastic tank testing of a compliant buoyant tower p. 365
Velocity measurements of modulated waves in deep water p. 375
Wave radiation and diffraction by a floating body in a two-layer fluid p. 383
Dynamics of deepwater offshore structures - a review p. 391
The numerical simulation of pollutant mixing zone from riverside discharge outlet in Three Gorges reservoir p. 401
Numerical simulation of pollutant dispersion in urban areas p. 409
El Nino phenomenon in SODA data p. 415
Numerical simulation of ash-spills induced by dike failure on ash tailings impoundments - a case study p. 421
Improvement of oxygen-deficient water using microbubble aeration technology p. 429
Dispersion of spilled oil by cavitating jet p. 435
Numerical simulation on the channel flow of fiber suspensions with the successive iteration method p. 443
Using artificial neural networks to estimate sea level in continental and island coastal environments p. 451
An in situ erosion rate of sediments in an urban river with a new device p. 459
Prediction of salinity intrusion using empirical equations and numerical modeling p. 465

Thermorheological effect on Benard and Marangoni convections in anisotropic porous media p. 471
Electroconvection in aqueous solutions of polymeric liquids p. 477
Dispersion of solute in a fully-developed flow of a Boussinesq-Stokes suspension p. 483
Linear and weakly non-linear analyses of convection in a micropolar fluid p. 489
Dispersion in a Hagen-Poiseuille flow of Casson fluid p. 495
Dispersion in a plane-Poiseuille flow of Casson fluid p. 501
The limiting internal solitary wave in a stratified fluid  p. 507
A transformation method for unsteady convection-diffusion equations in non-uniform difference grid systems  p. 513
Fluid forces and bistable flow on two circular cylinders in staggered arrangement  p. 523
Study on the control of flow past circular cylinder at subcritical Reynolds number by LES  p. 533
Numerical analysis of 3-D turbulent flow in the sump of the pump station  p. 539
Slamming - horizontal circular members in intertidal zone  p. 547
Nonlinear wave motions in containers and wave breaking characteristics  p. 555
Effects of travelling water screen configurations on pump sump flows  p. 563
Air entrainment induced by vorticity-free-surface interaction  p. 569
Hydrodynamic load acting on an oar blade and an improvement of rower's motion and equipments by using rowing velocity prediction program  p. 575
Water flow over box filled with porous media  p. 583
Numerical study on flow field around hydrofoil of finite span with shallow submergence  p. 589
Comparison of turbulence models in simulating flow past a circular cylinder above wall  p. 597
Vortex dislocation in wake-type flow caused by local spanwise nonuniformity  p. 605
Free-surface waves due to a stokeslet in a viscous fluid of infinite depth  p. 611
The interaction of gravity current with a submerged circular cylinder  p. 619
On characteristics of tandem hydrofoils  p. 627
Effects of terrain on the slow spreading of fluid mud  p. 633
Response characteristics and suppression of flow-induced vibrations of rectangular prisms with cross-flow vibrations  p. 641
Vortex-induced vibration of cylinders with non-linear compliance  p. 649
Numerical study of the three-dimensional flow around a vertical submerged cylinder  p. 655
Numerical simulation of water-entry and water-exit of a horizontal circular cylinder  p. 663
Velocity distributions in rectangular-section and trapezoid-section open channel flows with a new Reynolds-stress expression  p. 671
