

Preface	p. XI
Acknowledgements	p. XIII
APCOM 2005 Organizing Committee	p. XV
APCOM International Council Past Chairs	p. XVII
APCOM International Council Rotating Members	p. XIX
Business systems and project management	
An updated and modified O'Hara cost estimating model based on World and Iran economic conditions	p. 3
Mining methods selection based on multicriteria models	p. 19
Controlling of BOT-based infrastructure projects explained at Lubeck Herren tunnel in Northern Germany	p. 25
Evolution of the mechanism for selecting multi-criteria alternatives for optimizing strategies of investment into the mineral-raw industry	p. 35
Managing key business indicators through their lifecycle	p. 43
Technical efficiency analysis in Illinois coal mining sector	p. 49
Automatic information economic system for analysis, forecasting and decision-making by mineral and macroeconomic indicators of world countries' dynamic models	p. 55
Optimum dynamic management of mining machinery exploitation life: models with limited interval	p. 65
Data and enterprise information system utilization	
Improving mine mill performance in large metallurgical complexes	p. 73
Efficient utilization of LIMS data and integration with mining process management systems	p. 85
Improving operations in the mining industry with business process management technology	p. 89
Truck assignment performance evaluation by using data mining techniques	p. 95
Emerging technology	
Use of physical dynamic scale models with AWJ in mine planning	p. 103
GPS and sonar guidance of an underwater mining system	p. 109
Automatic acquisition and determination of rock discontinuity properties using three-dimensional laser scanning	p. 113
Stochastic modelling of open pit slope stability in heterogeneous hydrogeological medium	p. 119
Tools for the integration of sustainability into the mine design process	p. 125
Feasibility of gas production of offshore gas hydrate deposits by integration with GTL process	p. 133
Potential techniques for production of natural gas from hydrate reservoirs	p. 143
P9 project information management model, a mineral industry metadata case study	p. 153
Applications of computation intelligence in mining engineering	p. 163
The dynamic incremental maintenance algorithm and technology of data warehouse	p. 173
Geostatistics and reserve estimation	
Mapping water table level using piezometers readings and topography as secondary information - Trevo Mine - Brazil	p. 181
Collocated co-kriging application as an aid of longterm planning of the iron mines of Carajas	p. 191

Practical unfolding for geostatistical modeling of vein-type and complex tabular mineral deposits	p. 197
Comparative evaluation of radial basis functions and kriging for ore grade estimation	p. 203
Acceptable ergodic fluctuations and simulation of skewed distributions	p. 211
Applications of three-dimensional modeling and geostatistics in mine planning at Atacocha Mine, Peru	p. 219
Analysis of time-series satellite images to document changes in historic hydro-environmental conditions	p. 227
An integrated GIS modeling approach to mineral potential mapping of copper deposits of Singhbhum Belt, India	p. 235
Indicator simulations of categorical variables	p. 247
Data mining approach for environmental data predictions and classification	p. 253
The application of two stage indicator kriging in gold vein modeling	p. 259
Comparing ordinary kriging interpolation variance and indicator kriging conditional variance for assessing uncertainties at unsampled locations	p. 265
Open-pit mine planning and design	
Cutoff grade optimization algorithm for open pit mining operations with consideration of dynamic metal price and cost escalation during mine life	p. 273
Intelligent optimal production scheduling estimator	p. 279
Open pit mine planning and design - a case study	p. 287
Quarterly schedule development for an open-pit iron ore mine with blending constraints	p. 291
Optimization in Sungun copper mine, Iran	p. 297
From geophysics to reality: sand and gravel deposit evaluation in the computer age	p. 305
A model of discounted profit variation of open pit production sequencing optimization	p. 315
The implementation and use of GPS grade control in surface coal mining	p. 325
Application of Lagrange polynomial theory to surface mine optimization	p. 329
A genetic algorithms approach for grade control planning in a bauxite deposit	p. 337
Principles and models of block modeling of open-pit mining operations development	p. 343
Haulage road design: a case study on surface mine in New Mexico	p. 351
Process control and optimization	
Optimizing grinding control in the Boliden Aitik mine	p. 359
Grinding circuit advanced control - increasing reliability and profitability	p. 363
On-line imaging of aggregates for process control	p. 371
Application of boosting algorithm in neural network based ash measurement using online ash analyzers	p. 379
Decision support system to improve equipment effectiveness and reduce production cost in KGHM "Polska Miedz", Poland	p. 385
Study on automatic separation of coal and gangue based on image processing techniques	p. 391
Validation of the effectiveness of time series data for control of a mine ventilation environment	p. 397

Real-time mining analytical systems	
In-rest vehicle proximity systems with real-time transmission lock	p. 405
Wireless technology applied to mine planning	p. 413
Real time analysis for forecasting of chock shields performance a case study	p. 419
Safety systems	
The development and implementation of a minerals industry risk management gateway	p. 427
Guide on the safety of computer-controlled mining hoists	p. 435
NIOSH computer programs for bench crest failure analysis in fractured rock	p. 439
Simulation	
Equipment sizing of a material handling system using discrete event simulation	p. 449
Justification of "on-demand" ventilation systems by means of simulation techniques	p. 457
CFD simulation of the auxiliary fans interference in underground coal mining areas	p. 463
Performance evaluation of face equipment transporting systems by discrete event simulation	p. 467
Stochastic simulation-based risk assessment for drilling optimisation	p. 475
Standardized networked communication in mining	
GPS and satellite communication in underground mining; a 10 year development project still not working	p. 481
IREDES: Standardized integration of mining equipment into corporate IT infrastructures	p. 489
Impact of mine networking and machine - IT on future mine production	p. 495
Special US Department of energy	
Software tools for optimizing heavy medium cyclone circuits	p. 505
Model-based camera vision evaluation of mining machine motion	p. 513
Effects of heterogeneous hydrocyclone feed in a magnetite grinding circuit	p. 521
Detection of roof geology variation using recorded drilling parameters	p. 527
Integrated sensor networks for rock-mass characterization and material handling	p. 535
Modeling of damage response in high abrasive stress, fibrous monolith tools	p. 547
Simulation of ball and rock charge motion in semiautogenous mills for the design of shell and pulp lifters	p. 557
Hyperspectral imaging for real-time ore grading	p. 565
Development and demonstration of horizon sensor instrumentation for coal cutting drums	p. 571
Underground mine planning and design	
An innovative algorithm for intelligent block caving operations	p. 581
Estimation of structural response to mining-induced blast vibration using support vector machines	p. 587
The development of hydrogen mine vehicle power plant functions controllers	p. 595
Remote geomechanical instrumentation system developments and experience	p. 603
Increasing underground coal mine productivity through a training program	p. 611
Mitigating the risks associated with planning for the extraction of underground coal pillars in South Africa	p. 621

Object-oriented analysis and modeling for the mining production system of fully mechanized sub-level caving	p. 631
Integrating uncertainty in block cave production scheduling	p. 635
The connection between production schedule and cut-off optimization in underground mines	p. 643
An integrated, multidisciplinary evaluation of ultra-deep layouts	p. 655
Sequence optimisation for long-term mine planning	p. 667
Advances in underground mining equipment and technology may signal a future of autonomous mining	p. 675
Author index	p. 683
