The latest developments for in-situ rock stress measuring techniques  
Rock stress measurements as a practical rock engineering tool  
Extensive stress measurements program at the Toulustoue hydroelectric project - Quebec, Canada  
In situ rock stress measurements in Western Australia's Yilgarn Craton  
3-D stress measurement in deep tunnel by overcoring and hydraulic fracturing method  
Study on the recent state of stress of Yanghajing-Kangma region in Tibet Province  
Innovative concept of hydrofracturing for deep stress measurement  
Invention of automatic stress/property measurement probe for earthwork optimization  
Rock stress tensor measurements at El Teniente Mine, Chile  
The pump-in/flowback test improves routine minimum horizontal stress magnitude determination in deep wells  
Detection of borehole breakouts at the Forsmark site, Sweden  
Development of downward compact conical-ended borehole overcoring technique for in situ rock stress determination in deep borehole and its application examples  
Design and calibration of a new triaxial strain cell for rock stress measurement  
Rock stress measurements in Alpi Apuane quarry sites by means of hydraulic fracturing (HF)  
Comparison between 2D overcoring and hydraulic fracturing stress measurements in the Apuane Alps  
Development of hydraulic fracturing in-situ stress measurement technology and its application  
Extensive core disking during overcoring rock stress measurements in the worlds longest double tube road tunnel  
Evaluation of rock stress estimation by the Kaiser effect  
Kaiser effect in tri-axial tests of limestone samples  
Correlation of in-situ stresses to geological structures in two underground mines  
Estimation in-situ stress magnitudes from core disking  
Determination of in-situ stress from oriented core  
An assessment of in-situ rock stress based on the empirical TSI index and the logic tree method  
A new approach for measuring the in situ 3D rock stress tensor in drilled borehole  
Stress fields in joined elastic regions : modelling based on discrete stress orientations  
Borehole breakouts an in-situ stress in sandstones  
Present-day stress orientation in Norway as deduced from stress-release features  
Evaluating the pre-stress of Mu-Shan sandstone using acoustic emission and deformation rate analysis  
A comparison of overcoring and AE stress profiles with depth in Western Australian mines
Discrete element modelling of faults in strike-slip to compressive stress regimes, Maracaibo Basin, Venezuela

Horizontal stresses in cretaceous sediments in the UK Central Graben : relationship with Jurassic overpressure

Natural stress field evaluation using borehole ovalisation analysis and its comparison with hydrofract measurements

Results of continuous in-situ stress measurements with optimal strain sensors

In situ rock stress measurements and stress change monitoring at Mt. Charlotte Gold Mine, Western Australia

In-situ rock stress and construction of groundwater-based ground source energy plants

Analysis of the distribution of rock stress ratio and its influence on the behavior of underground opening

In situ rock mass stresses in Iceland and rock mass deformation of underground caverns in the Karahnjukar and Blanda hydroelectric projects

Geomechanical evaluation of a crusher chamber excavation at El Teniente Mine, Codelcop, Chile

On the assessment of the effect of the anisotrophy in in-situ stress on support pressure in tunnels

The influence of rock stress on dimension stone quarrying

Interpretation of exceptional stress levels from back-analysis of tunnelling problems in shallow basalts at the ITA hydroelectric power project in S.E. Brazil

Assessment of in-situ initial rock stress in underground powerhouse cavern of Karun3 dam

Stress field approximation from stress measurement

Estimation of rock stresses at Oyu Tolgoi, Mongolia

Reliable stress assessment using measurements, observations, and analysis

The relations between strong earthquake and modern tectonic stress field in continental China

The characteristics of regional tectonic stress field derived from manifold data in Yumen area, Gansu of China

Comparisons between three-dimensional in-situ stresses determined by anelastic strain recovery and differential strain curve analysis methods

Interpretation of in-situ rock stress measurement by overcoring

Quality control and interpretation of in situ stress measurement data

Interpretation of stresses adjacent to the Cadillac fault assuming marginal large-scale rock mass stability

Interpretation of in situ rock stress measurements by inverse method

Influence of anisotropy on overcoring stress determination assuming isotropy

Back analysis of geostress field of deep river valley region - a case study for Lexiwa hydropower project with high stress, China

A study of regression analysis on geostress and stability of a large underground opening complex

Virgin rock stress measurement - time for method innovation

Influence of fracture stiffness on local stress redistributions

Updated in situ stress database for Southern Africa
