Stability analysis accounting for macroscopic and microscopic structures in clays p. 3

Soft soil stabilisation with special reference to road and railway embankments p. 35

Modelling and numerical simulation of creep in soft soils p. 57

Experimental study on shear behavior and an improved constitutive model of saturated sand under complex stress condition p. 73

Sensitivity analysis of magnetic extensometers for measuring vertical movement of earth dams on soft soils p. 95

Building an embankment with simultaneous vacuum loading p. 105

Failure of a column-supported embankment over soft ground p. 117

Performance of highway embankments on Bangkok clay p. 123

Geogrid-reinforced roadway embankment on soft soils: a case study p. 129

Monitoring the staged construction of a submerged embankment on soft soil p. 139

Optimal design of grillage supporting structures for stabilizing slopes p. 145

Measured settlements of the Srmin high embankment p. 153

Joint calculation of a foundation and soil of the large-scale structure in view of creep p. 159

Pile resistance variations over time for displacement piles in young alluvium p. 171

Group effect on model piles under axial monotonic loading p. 179

2D numerical modeling of Pile-net composite foundation of high-speed railway embankment in soft soils p. 189

Study on the influence of pile foundation due to excavation p. 199

Study on long-term settlement behavior of driven pile foundation in soft soil p. 205

Analyzing the static tests of boring piles through CFA technology p. 213

Design and performance of a combined road-channel-dike structure founded on very soft Bangkok clay p. 219

Improvement of a very soft dredged silty clay at the port of Valencia (Spain) p. 231

Study of geosynthetic reinforced subgrade expressway in Taiwan p. 237

A study on dynamic shear modulus ratio and damping ratio of recently deposited soils for southern region of Jiangsu province along Yangtze River, China p. 245

Investigations on improvement of soft ground treated by various vertical drains under embankment on soft clay foundation p. 251

Static and seismic stability of geogrid reinforced-soil segmental bridge abutments constructed on soft-soil p. 257

Geotechnical behavior of organic soils of North Sarawak p. 267

Behavior characteristics of unreinforced and reinforced lightweight soils p. 275

A case study of building damage risk assessment due to the multi-propped deep excavation in deep soft soil p. 281

Study on jackup spudcan punch-through p. 291

Apparent earth pressure of soft soils overlying hard bedrock at South Link in Stockholm p. 299

Performance of stone column encased with geogrids p. 309

Strength distribution of soft clay surround lime-column p. 315

The investigation of mud tailings and a comparison of different test methods with 3[superscript rd] world constraints p. 321
A geotechnical data base development and applying data mining techniques to extract the common trends of offshore geotechnical properties of South Pars Gas Field/Persian Gulf IR-IRAN p. 327

Inaccurate interpretation of offshore geotechnical site investigation results and risk associated: a case study of conductors collapse in driving p. 333

Behaviour of plate anchors under short-term cyclic loading p. 341

Dissipation process of excess pore water pressure caused by static pressed pile in soft soil p. 347

Research on control of settlement and stabilization of high subgrade beside hill and above soft foundation in Wenzhou expressway p. 351

Engineering performances of soil disturbed by underground mining and its application p. 357

Compressibility properties of reconstituted organic soils at Khulna Region of Bangladesh p. 367

Temperature effects on engineering behaviour of soft Bangkok clay p. 373

Discharge capacity of vertical drains installed in soft ground with time by laboratory small and large tests p. 381

Study of preconsolidation pressure values derived by the modified Casagrande method p. 385

Modeling sand behavior in constant deviatoric stress loading p. 389

Identification of a general poro-viscoelastic model of one-dimensional consolidating soft soil p. 397

Characterisation of peat using full flow penetrometers p. 403

Experimental study of ageing effect on the undrained shear strength of silty soil p. 415

New relationships to find the hydraulic conductivity and shear wave velocity of soft Pusan clays p. 421

Geotechnical characteristics of a very soft dredged silty clay and a soil-cement mix in Valencia Port (Spain) p. 427

Consolidation behavior of a soft clay composite p. 437

Laboratory testing of a soft silty clay p. 447

Effect of heating on pore water pressure of soft bentonite p. 457

Undrained strength and compressibility of mixtures of sand and coal p. 463

The assessment of destructuration of Bothkennar clay using bender elements p. 471

Softening characteristics of soil cement on the condition of soaking p. 481

Progressively destructurated undrained strength of natural soils p. 485

Numerical modeling of interaction between flexible retaining wall and saturated clayey soil in undrained and drained conditions p. 493

Numerical modeling for ground settlement due to two-tunnel shielding construction p. 499

Numerical modeling of an embankment on soft ground improved by vertical rigid piles p. 505

Numerical simulation of passively loaded piles adjacent to embankment constructed on soft Bangkok clay p. 515

Three dimensional nonlinear finite element analyses for horizontal bearing capacity of deeply-embedded large-diameter cylindrical structure on soft ground p. 521
Numerical modelling of a very soft dredged silty clay improvement in Valencia port (Spain) p. 531
A new method for slope stability analysis of foundation pit due to groundwater seepage p. 541
A simplified method for stability analysis of reinforced embankments p. 547
Stability analysis of expansive soil slope and its slope remediations p. 553
Determination of non-circular critical slip surface by harmony search algorithm in slope stability analysis p. 557
Simple critical state model predicting the response along slip surfaces p. 563
The other soil parameters in stability limit analysis of soil-nailed walls in soft soil p. 573
Centrifuge study on assessment of geological barrier of soft ground with floating type sand drains p. 581
The use of dynamic compaction in liquefaction hazards mitigation at reclaimed lands in Assalouyeh perro-chemical complex-Iran p. 587
Optimization of strength and ductility of Class C fly ash stabilized soft subgrade soils p. 595
Stabilization of soft day site for development using Rammed Aggregate Piers p. 601
Improvement of soft soils by static SCP using a hydraulically-operated rotary penetration p. 611
Promotion of consolidation for dredged soft sediments using permeable bags p. 619
Estimation of the settlement of improved ground with floating-type cement-treated columns p. 625
Improvement for soft soil by soil-cement mixing p. 637
Improving engineering properties of soft clayey soils using electrokinetics : a laboratory based investigation p. 643
3D modelling of deep mixing p. 649
Trafficability evaluation of PTM treated dredged soil deposit p. 657
Comparison of performance between the dry and wet Deep Mixing method in soft ground improvement p. 667
A fundamental study on the remediation of contaminated soil with heavy metals based on electrokinetic and magnetic properties p. 673
Effect of zeolite and bentonite on the mechanical properties of cement-stabilized soft clay p. 681
Enhancement of strength of soft soils with fly ash and lime p. 691
Soil improvement using compaction grouting - a laboratory investigation on the confining pressure and injection rate in completely decomposed granite p. 697
The physical and mechanical properties of lime stabilized high water content expansive soil p. 703
Combined preloading compaction and composite ground to treat the soft subgrade of highway p. 709
The use of statistic analysis in predicting of ground and wall movements in soft clay p. 717
Analytic solutions of consolidation of fine-grained compressible soils by vertical drains p. 723
Improved stress-strain model of soft soil based on energy dissipation theory p. 731
Application of BP neural network in identifying soil strata by CPTU p. 735
A simplified plastic hysteretic model for multi-directional nonlinear site response in soft soils
Mathematical description of consolidation test
Back analysis of three case histories of braced excavations in Boston Blue Clay using MSD method
Effect of ratio of influence zone and type of vertical drain on consolidation of soft clay due to radial flow
Study on the depth of crack propagation of unsaturated expansive soils
Elastic viscoplastic modeling of two cases involving PVD improved Hong Kong marine clay
