Preface

Modelling cracking in rocks and cementitious materials  p. 3

The role of microcracks and microvoids in the toughening of quasi-brittle materials  p. 34

Non-local plasticity softening model for brittle materials  p. 44

Micromechanics and localization in concrete and rock  p. 54

Softening curves for concrete and structural response  p. 66

Tension softening diagram of steel fiber reinforced concrete and size effect on the flexural strength  p. 76

Apparent tensile strength and fictitious fracture energy of concrete: a fractal geometry approach to related size effects  p. 86

Simulation of concrete cracking: a numerical evaluation of the rotating crack model  p. 95

Environmental factors for post-tensioning materials in concrete structures  p. 107

Empirical analysis of the fracture process in high strength concrete loaded in uniaxial compression  p. 122

Indirect determination of the [sigma]-w relation of HSC through three-point bending  p. 135

Asymptotic tip fields for a steadily growing crack in pressure-sensitive materials  p. 145

Acoustic emission and source location in concrete subjected to mixed-mode loading  p. 157

Mixed-mode fracture propagation: a combined numerical and experimental study  p. 166

Application of fracture mechanics to the study of crack propagation in concrete structures using a granular microcracked model  p. 176

Experimental crack identification of mixed-mode by acoustic emission  p. 186

Multi-domain BEM implementation for mixed-mode cracking in concrete  p. 196

Quantitative assessment of fracture of concrete by using BEM for inhomogeneous materials  p. 206

Properties of concrete related to fatigue damage  p. 217

Cyclic loading of reinforced concrete continuous beams: finite element analysis and experimental investigation  p. 227

Cyclic behavior of reinforced concrete beams: different responses depending on mechanical and geometrical properties  p. 237

Damage of concrete structures due to temperature changes  p. 247

Development of damage and progressive fracture of an heterogeneous rock material  p. 257

Goals and barriers to recycling of concrete and masonry  p. 269

Recycled aggregates with fly-ash: an ecological and energy saving concrete  p. 284

Demolition and recycling of a reinforced concrete bridge during construction of the great belt link in Denmark  p. 292

Investigation of anti-bacterial ability of concrete  p. 307

Mechanics of microdefected materials  p. 317

Macrocrack propagation in materials with multi-scale microcracking  p. 324

A damage model for rock with interacting microcracks  p. 334

Damage propagation of jointed rock with consideration of joint roughness  p. 344

Progressive damage of interfaces in layered rock due to cyclic impact  p. 356
