Nuclear medicine in tumor diagnosis and therapy

Diagnosis

Tumor-seeking radiopharmaceuticals: nature and mechanisms
Radionuclide imaging of hepatic tumors
PET in lymphoma and malignant melanoma
Parathyroid imaging
Adrenocortical scintigraphy
Gallium scintigraphy in tumor diagnosis and management
Thallium-201 chloride: a tumor imaging agent
MIBG in the diagnosis of neuroendocrine tumors
Peptide receptor scintigraphy in oncology
The diagnostic role of radiolabeled antibodies in cancer
Cancer cell biology basis for nuclear oncology
Differentiated thyroid carcinoma
Medullary thyroid cancer
Breast scintigraphy
Pediatric tumors
Functional analysis of cancer therapy effects in other organs
The use of intraoperative probes in surgical oncology
The sentinel lymph node in surgical oncology
FDG PET Imaging of Head and Neck Cancer
External Beam Radiotherapy Treatment Planning with PET
PET in aerodigestive tumors
PET in gynecological tumors (breast, cervical and ovarian)
Nuclear medicine imaging in pediatric oncology
Positron Emission Tomography (PET) in genitourinary tumors: prostate, bladder, testicular and renal cancer
Future clinical applications of PET (amino acid and nucleoside imaging)
PET imaging of brain tumors
Nuclear medicine in tumor diagnosis and therapy
Radionuclide therapy
Principles of radionuclide therapy
Dosimetric and radiobiological considerations: The MIRD concept
Dosimetric and radiobiological considerations: Patient-individual dosimetry
Radioiodine therapy of the thyroid: Treatment of benign thyroid diseases
Radioiodine therapy of the thyroid: Treatment of thyroid malignancies
Phosphorus-32 therapy in myeloproliferative disorders
Palliation of bone pain
Radioimmunotherapy of hematologic neoplasms
Radioimmunotherapy of solid tumors
MIBG therapy
Receptor-targeted radiopptide therapy
Use of radiolipiodol in the treatment of hepatic tumours
Alternative approaches to targeting therapy
New developments: Nuclear gene therapy
Atlas 1: PET and PET/CT
Atlas 2: SPET and SPET/CT
Nuclear medicine in disorders of bones and joints
Bone scintigraphy: the procedure and interpretation
Evaluation of primary bone tumors
The evaluation of malignancy: metastatic bone disease
Assessment of infection
Radionuclide assessment of the painful joint prosthesis
Vascular manifestations
Bone scintigraphy in trauma
Bone scintigraphy in sports medicine
Growth and metabolic disorders
Arthritis: current status of scintigraphy and future trends
Radiation synovectomy
Quantitative studies of gastrointestinal function
Salivary gland disorders
Esophageal function (transport and motility)
Gastric motility
Intestines: evaluation of absorption
Studies of small bowel and colonic transit
Hepatobiliary function: biliary kinetics
Scintigraphic measurement of hepatic function
Nuclear medicine in acute care
Nuclear cardiology and cardiac transplantation
Cardiovascular conditions: venous thrombosis
Pulmonary embolism
Non-embolic disease of the lungs
Gastrointestinal bleeding
Cholescintigraphy
