Preface

List of Contributors

Mapping the human nervous system in health and disease
Principles and pitfalls of nerve conduction studies
Acute and chronic demyelinating polyneuropathy: an overview
Utility of somatosensory evoked potentials (SEPs) in spinal cord lesions and functional surgery of pain and spasticity
Multimodal approaches in the evaluation of epilepsy patients for surgery
Movement-related brain electrical activity
New trends in magnetoencephalography
Cognitive potentials and corticocortical connections in humans
Motor cortex plasticity
What makes a brain oscillation abnormal?
Electrophysiological and morphological changes in the peripheral nervous system with ageing
Clinical applications of cyclic alternating pattern
Power spectral sleep EEG findings in patients with obstructive sleep apnea and upper airway resistance syndromes
Survey of inherited peripheral nerve diseases
Interconnections between cortical areas revealed by transcranial magnetic stimulation
Isolation of late event-related components to checkerboard stimulation
Continuous EEG monitoring in the intensive care unit
Percutaneous stimulation of mechanoreceptors and peripheral neural transmission in normal subjects and patients with hereditary ataxias
Non-invasive pre-surgical evaluation with EEG/MEG source analysis
Excitability of the motor cortex in amyotrophic lateral sclerosis
Introducing priors in the EEG/MEG inverse problem
Spinal mechanisms of spasticity
Genotype-phenotype correlation in spinocerebellar ataxias (SCA)
Cortical visual processing
Neuromagnetic recordings and magnetic brain stimulation in the evaluation of sensorimotor hand area interhemispheric differences: normative, experimental and patients' data

Does the vestibulo-ocular reflex use the same pathways for functions in roll and pitch planes?
Short and middle latency vestibular evoked potentials to angular and linear acceleration
Evoked potentials in sound localization: timing of activity along the auditory pathway
EEG band centroid modifications in HIV patients
Genetic and antibody-mediated channelopathies at the neuromuscular junction
Mechanisms involved in the propagation of interictal epileptiform discharges in partial epilepsy
P300 and Alzheimer's disease: oddball task difficulty and modality effects
Value and limits of cardiovascular autonomic function tests p. 288
Non-invasive assessment of motor unit properties with linear electrode arrays p. 293
Electroencephalogram in metabolic encephalopathies p. 301
Evoked potentials to painful laser stimulation p. 311
Value and limits of expert systems in clinical neurophysiology: an integrated 'Avicennian' approach p. 328
Congenital muscular dystrophies. A short review of the recent progresses p. 335
Model-based delta plots beat power-based ones p. 341
Can evoked potentials be useful in monitoring multiple sclerosis evolution? p. 349
Spinal reflex pathways transcend the scheme of an auxiliary or independent system p. 358

Characteristics of SEP from subthalamic nucleus in human p. 364
Spinal reflex studies enable to analyze supraspinal dysfunctions p. 373
Neurophysiological aspects of diagnosis in neuromuscular transmission defects - an update p. 377
Movement-related potentials and magnetic fields: new evidence for SMA activation leading MI activation prior to voluntary movement p. 386
Auditory information processing in comatose patients: EPs to synthesised 'musical' tones p. 402
High-rate transcranial magnetic stimulation: influence on short-term memory, heart rate and blood pressure changes p. 408
Muscle sonography p. 413
Diagnostic relevance of anti-neural antibodies in dysimmune neuropathies p. 419
MEG spontaneous activity in patients with memory disorders p. 428
Inhibitory function in chronic focal epileptogenesis p. 437
Do GABAergic circuitries play a critical role in the regulation of seizure-induced neuronal damage and synaptic reorganization in the rat hippocampus? p. 443

Antiepileptic drugs potentiating GABA p. 450
Cognitive effects of GABAergic antiepileptic drugs p. 458
Cognitive impairment in multiple sclerosis: a longitudinal study p. 465
Event-related potentials in the assessment of cognitive function in multiple sclerosis p. 469
Electrophysiological investigations in multiple sclerosis dementia p. 480
Mechanisms of action of intravenous immunoglobulin (IVlg) in autoimmune and neuromuscular diseases p. 486
Chronic inflammatory demyelination polyneuropathy (CIDP) p. 493
IVlg in polymyositis and myasthenia gravis p. 499
High-dose intravenous immunoglobulins in multifocal motor neuropathy p. 506
Safety and tolerability of intravenous immunoglobulins p. 514
Monitoring the natural history and results of therapeutic intervention in diabetic neuropathy: clinical measures p. 521
Diabetic neuropathy - the utility of nerve biopsy p. 525
Nerve conduction study in diabetic polyneuropathy: multicenter analysis on intertrial variability p. 534
Autonomic tests in diabetic neuropathy  p. 541
The Italian multicentre study on the prevalence of distal symmetric polyneuropathy: correlation between clinical variables and nerve conduction parameters  p. 546
Utility of the skin biopsy method  p. 553
Clinical measures of disease activity in multiple sclerosis  p. 560
Non-conventional MR techniques in monitoring MS activity and evolution  p. 565
Immunological surrogate markers of disease activity in multiple sclerosis  p. 570
Neurophysiological markers of relapse, remission and long-term recovery processes in MS  p. 584
Monitoring temporal aspects of cortical information processing  p. 591
Neural bases of time estimation: a PET and ERP study  p. 598
Subject Index  p. 605
