Biological aspects of flavour perception and structure-activity relationships
Molecular and gustatory characterisation of the impact taste compounds in black tea infusions
Evidence for antagonism between odorants at olfactory receptor binding in humans
3D-QSAR study of ligands for a human olfactory receptor
Effect of physiology and physical chemistry on aroma delivery and perception
Structure-activity relationships of trigeminal effects for artificial and naturally occurring alkamides related to spilanthol
Using gas chromatography-olfactometry (GCO) to measure varying odorant-specific sensory deficits (OSDs)
Volatile compounds of Wagyu (Japanese black cattle) beef analysed by PTR-MS
Human olfactory self-adaptation for structurally-related monoterpenes
Genomics and biotechnology
Genetic engineering of strawberry flavour
Biotechnological production of terpenoid flavour and fragrance compounds in tailored bioprocesses
Identification of the gene responsible for the synthesis of volatile sulfur compounds in Brevibacterium linens
Heritability studies of aroma compounds in carrots using rapid GC methods
Authentication of biotechnological flavours by isotopic analyses
Exploiting natural microbial diversity for development of flavour starters
Lipase catalysed formation of methylthioesters using a continuous reactor
Cloning and characterisation of the main intracellular esterase from Lactobacillus rhamnosus HN001
Influence of pH and carbon source on the production of vanillin from ferulic acid by Streptomyces setonii ATCC 39116
Flavours generated by enzymes and biological systems
Enzymatic conversions involved in the formation and degradation of aldehydes in fermented products
Vitis vinifera carotenoid cleavage dioxygenase (VvCCD1): gene expression during grape berry development and cleavage of carotenoids by recombinant protein
Labelling studies on pathways of amino acid related odorant generation by Saccharomyces cerevisiae in wheat bread dough
Pathway analysis in horticultural crops: linalool as an example
Microbial resolution of 2-methylbutyric acid and its application to several chiral flavour compounds
Effect of malolactic fermentation on the volatile aroma compounds in four sea buckthorn varieties
In vivo deodorisation with caffeoylquinic acid derivatives
The influence of fermentation temperature and sulfur dioxide on the volatile composition and flavour profile of cashew wine
Modulation of volatile thiol and ester aromas by modified wine yeast
Heterologous expression of carotenoid-cleaving dioxygenases from plants for the production of natural flavour compounds
Lilac aldehydes and lilac alcohols as metabolic by-products of fungal linalool biotransformation
Development of a plate technique for easy and reliable detection of volatile sulfur compound-producing microorganisms p. 125

Contribution of wild strains of lactic acid bacteria to the typical aroma of an artisanal cheese p. 129

Catabolism of methionine to sulfvolatiles by lactic acid bacteria p. 133

Ability of Oenococcus oeni to influence vanillin levels p. 137

The biosynthesis of furaneol in strawberry: the plant cells are not alone p. 141

Method for the enzymatic preparation of flavours rich in C6-C10 aldehydes p. 145

Key aroma and taste components

Aroma compounds in black tea powders of different origins - changes induced by preparation of the infusion p. 151

Characterisation of Cheddar cheese flavour by sensory directed instrumental analysis and model studies p. 157

The analysis of volatiles in Tahitian vanilla (Vanilla tahitensis) including novel compounds p. 161

Screening and identification of bitter compounds in roasted coffee brew by taste dilution analysis p. 165

The flavour chemistry of culinary Allium preparations p. 169

4'-Hydroxyflavanones are the bitter-masking principles of Herba Santa p. 173

The consumption of damascenone during early wine maturation p. 177

Sensory and structural characterisation of an umami enhancing compound in green tea (mat-cha) p. 181

Optimisation and validation of a taste dilution analysis to characterise wine taste p. 185

Key aroma compounds in apple juice - changes during juice concentration p. 189

Characterisation of the odour volatiles in Citrus aurantifolia Persa lime oil from Vietnam p. 193

Identification of character impact odorants in coriander and wild coriander leaves using GC-olfactometry and GC x GC-TOFMS p. 197

The astonishing sensory and coagulative properties of methylcyclopolsiloxanes p. 201

Syneric, additive and antagonistic effects between odorants with similar odour properties p. 205

Preparation of the enantiomeric forms of wine lactone, epi-wine lactone, dill ether and epi-dill ether p. 209

Hierarchy and identification of additional important wine odorants p. 213

Identification of key odorants related with high quality Touriga Nacional wine p. 217

Spiking as a method for quantification of aroma compounds in semi-hard cheeses p. 221

Modification of bread crust flavour with enzymes and flavour precursors p. 225

The spectator role of potassium hydroxide in the isomerisation of eugenol to isoeugenol p. 229

Characterisation of key odorant compounds in creams from different origins with distinct flavours p. 233

Flavour changes in food production and storage

Aroma changes from raw to processed products in fruits and vegetables p. 239

Occurrence of polyfunctional thiols in fresh and aged lager beers p. 245
Flavour and health-promoting compounds in broccoli and cauliflower - an inconsistency?  
Assessment of fresh salmon quality under different storage conditions using solid phase microextraction  
Variatel differences in the aroma compound profile of blackcurrant berries  
Effect of development stage at harvest on the composition and yield of essential oils from thyme and oregano  
Deceleration of beer ageing by amino acid and Strecker aldehyde monitoring over the brewing process  
Packaging material and formulation of flavoured yoghurts: how to choose the kind of polymer in accordance with the yoghurt composition?  
Light-induced off-flavour in cloudy apple juice  
Formation and determination of microbially-derived off-flavour in apple juice  
Off-flavours of soy ingredients: astringency - sensory perception, key molecules and masking strategies  
Optimising soy sauce quality by linking flavour composition with consumer preference  
Analysis of Gruyère-type cheeses by purge and trap GC-MS and solvent assisted flavour evaporation GCO/MS  
Influence of pasteurisation and pulp amount on partition coefficients of aroma compounds in orange juice  
Comparison of cold pressed and essence orange oil oxidative stability using TI GCO and GC-MS  
Flavour quality of organic tomatoes grown in different systems  
1-Ethoxy-1-(1-ethoxy-ethoxy)-ethane: a new acetaldehyde precursor  
Formation of methyl (methylthio)methyl disulfide in broccoli (Brassica oleracea (L.) var. italica)  
Discrimination of virgin olive oil defects - comparison of two evaluation methods: HS-SPME GC-MS and electronic nose  
Characterisation of volatile compounds in selected citrus fruits from Asia  
Flavour and colour changes during processing and storage of saffron (Crocus sativus L.)  
Flavours generated by thermal processes  
Investigation of the key flavour precursors in chicken meat  
Aroma formation in beef muscle and beef liver  
Effect of baking process and storage on volatile composition of flaxseed breads  
Formation of flavour compounds in reactions of quinones and amino acids  
Formation of 4-hydroxy-5-methyl-3(2H)-furanone (norfuraneol) in structured fluids  
Glycerol, another pyrazine precursor in the Maillard reaction  
Influence of added carbohydrates on the aroma profile of cooked pork  
Facts and ‘artefacts’ in the flavour chemistry of onions  
Relationship between acrylamide formation and the generation of flavour in heated foods  
Modelling the formation of Maillard reaction intermediates for the generation of flavour  
The effect of fatty acid precursors on the volatile flavour of pork
The role of lipid in the flavour of cooked beef p. 375
Carotenoids as flavour precursors in coffee p. 379
Retention and release
In vivo flavour release from dairy products: relationships between aroma and taste release, temporal perception, oral and matrix parameters p. 385
How can protein ratio affect aroma release, physical properties and perceptions of yoghurt? p. 391
Role of viscosity and hydrocolloid in flavour release from thickened food model systems p. 395
The molecular organisation of dairy matrices influences partitioning and release of aroma compounds p. 399
Aroma release under oral conditions p. 403
The role of lipids in aroma/food matrix interactions in complex liquid model systems p. 409
A simple model for explaining retronasal odour properties of odorants through their volatility p. 413
Volatile delivery under dynamic gas flow conditions p. 417
Determination of specific interactions between aroma compounds and xanthan/galactomannan mixtures p. 421
NMR Spectroscopy study of interactions between [Beta]-lactoglobulin and aroma compounds p. 425
Effect of gum base and bulk sweetener on release of specific compounds from fruit flavoured chewing gum p. 429
Influence of in-mouth aroma release on individual perception p. 433
Control of aroma transfer by biopolymer based materials p. 437
Dynamics of flavour release from ethanolic solutions p. 441
Active product packaging flavour interaction p. 445
Transfer of volatile phenols at oak wood/wine interface in a model system p. 449
Flavour release at the interfaces of stirred fruit yoghurt models p. 453
Requirement for a global design to remove fat from flavoured yoghurts p. 457
Phase ratio variation method as an efficient way to determine the partition coefficients of various aroma compounds in mixture p. 461
Role of mastication on the release of apple volatile compounds in a model mouth system p. 465
Volatile loss from dry food polymer systems resulting from chemical reactions p. 469
Influence of proteins on the release of aroma compounds into polymer film p. 473
Glycosidically bound alcohols of blackcurrant juice p. 477
Sensory - instrumental relationships
Prediction of wine sensory descriptors from GC-olfactometry data: possibilities and limitations p. 483
Interactions of basil flavour compounds in tomato soups of varying Brix and acidity p. 489
Characterisation of the flavour of infant formulas by instrumental and sensory analysis p. 493
Prediction of the overall sensory profile of espresso coffee by on-line headspace measurement using Proton Transfer Reaction-Mass Spectrometry p. 497
Interactions between food texture and oral processing affecting the strawberry flavour of custard desserts p. 501
Analysis of aroma compounds from carrots by dynamic headspace technique using different purging and cutting methods p. 505
A study of sensory profiling performance comparing various sensory laboratories - a data analytical approach p. 509
Influence of dehydration on key odour compounds of saffron p. 513
Determination of odour active aroma compounds in a mixed product of fresh cut iceberg lettuce, carrot and green bell pepper p. 517
ChemSensor classification of red wines p. 521
Comparing predictability of GC-MS and e-nose for aroma attributes in soy sauce using PLS regression analysis p. 525
Role of Strecker aldehydes on beer flavour stability p. 529
Holistic taste analysis p. 533
Black tea mouthfeel characterisation by NMR analysis and chemometrics p. 537
Determination of commercial orange juice quality factors using descriptive and GCO analyses p. 541
Quality of old and new carrot cultivars from ecological cultivation p. 545
Effect on time-intensity results - comparison of time information versus no time information p. 549
The perception of strawberry aroma in milk p. 553
Advanced instrumental analyses

Thermal flavour generation: insights from mass spectrometric studies p. 569
Innovative mass spectrometric tools for the structural elucidation of flavour compounds p. 573
Optimisation of stir bar sorptive extraction (SBSE) for flavour analysis p. 577
A novel prototype to closely mimic mastication for in vitro dynamic measurements of flavour release p. 581
MS-nose flavour release profile mimic using an olfactometer p. 585
Nosespace with an ion trap mass spectrometer - quantitative aspects p. 589
The specific isolation of thiols using a new type of gel p. 593
Prediction of gas-chromatographic retention indices as a tool for identification of sulfur odorants p. 597
Re-investigation of sulfur impact odorants in roast beef using comprehensive two-dimensional GC-TOF-MS and the GC-SNIF technique p. 601
Searching the missed flavour: chemical and sensory characterisation of flavour compounds released during baking p. 605

Workshops
Gastronomy: the ultimate flavour science? p. 611
Methods for artificial perception: can machine replace man? p. 617
Challenges for data analysis in flavour science p. 619
