

Foreword	
List of Contributors	
Nicole Lesevre (1924-1989)	
Russell Harter (1940-1990)	
Source Localization (EEG and MEG), Neuro-Imaging and Event-Related Desynchronization	
Section I: Introductory remarks	p. 3
Topographic representation of event-related potentials	p. 5
Neuromagnetic studies of sensory functions and mental imagery	p. 13
Separation and identification of event-related potential components by brain electric source analysis	p. 24
Localization of brain sources of visually evoked responses: using single and multiple dipoles. An overview of different approaches	p. 38
Physiological sources of evoked potentials	p. 47
Event-related desynchronization during motor behavior and visual information processing	p. 58
Movement and Stimulus Preceding Brain Activity	
Section II: Introductory remarks	p. 69
Activity of single neurons in monkey cortex preceding sensory cued limb movements	p. 71
Cortical potentials associated with voluntary movements in monkeys	p. 80
Functional localisation of motor processes in the human cortex	p. 97
Perception or action: some comments on preparatory negative potentials	p. 116
Pharmacology and ERPs	
Section III: Introductory remarks	p. 133
Stimulant drugs and ERPs	p. 135
Contingent negative variation (CNV) in psychopharmacology	p. 142
Dopamine and CNV: studies of drugs, disease and nutrition	p. 153
Noradrenergic and cholinergic influences on the genesis of P3-like potentials	p. 165
Discussion: towards a pharmacology of information processing	p. 173
Selective Attention and Mental Chronometry	
Section IV: Introductory remarks	p. 179
Visual-spatial attention: preparation and selection in children and adults	p. 183
Mechanisms of auditory selective attention as revealed by event-related potentials	p. 195
The search for 'neutral' conditions for recording control event-related potentials in order to assess cognitive components to both irrelevant and relevant stimuli: evidence for short-latency cognitive somatosensory effects	p. 210
ERPs and selective attention: commentary	p. 222
Selective attention and mental chronometry	p. 228
Discrete versus continuous information processing: introduction and psychophysiology	p. 244
Continuous versus discrete information processing: evidence from movement-related potentials	p. 260
Brain control of cardiovascular dynamics	p. 270

## Aging and Dementia

Section V: Introductory remarks	p. 287
The electroencephalogram and evoked potentials in normal aging and dementia	p. 289
P300 in the evaluation of aging and dementia	p. 304
Arousal and effort: a review and theoretical synthesis of studies of age-related changes in event-related potentials	p. 324
ERPs and brain structure: relationships across the adult age span in alcoholics and in a patient with herpes simplex encephalitis	p. 342
Cerebral function in aging and Alzheimer's disease: the role of PET	p. 355
Hippocampus pathology in dementia: post-mortem assessed cation shifts and amino acid transmitter contents and its possible neuroimaging in vivo	p. 366
Subject Index	p. 381
