Preface

Members of the programme and organizing committee

List of participants

Research and development on advanced learning technologies in Europe p. 3

A state of the art courseware engineering system p. 17

System dynamics as a platform for educational software production p. 27

Tools for research-simulating learning p. 41

The structuring and testing of hypermedia learning environments p. 49

Computer mediated documentation. Can multi media be used for technical documentation in the future? p. 57

Software tools, not computer aided instruction, for effective use of computers in education p. 63

The didactical potential of modern workstations for teaching science and technology p. 71

The need for unification within computer mediated education p. 79

Informatics and its didactics in computer mediated education p. 87

Information systems for strategic thinking support p. 91

The computer mediated education scenario in Nepal p. 99

The development of an interactive videodisc to facilitate students' acquisition of interviewing skills in systems analysis courses p. 107

How to incorporate expert knowledge into an authoring system p. 117

A hyperlaboratory to promote engineering problem explorations: applications to computer science and robot mechanisms p. 127

Computer aided systems engineering tools (a common ground for computer scientists and engineers) p. 137

On the multimedia computer aided instruction system with an exercise support facility for novice programmers p. 155

Hypermedia and academic level education: promises and problems p. 163

Multimedia environment for computer-based training in electronics and information technologies p. 173

Identification and use of domain-specific knowledge structures in software-development and teaching p. 181

Using computer graphics to teach computer graphics p. 195

Development and evaluation of computer-mediated education systems for customer engineers p. 205

An integrated computer-based course bridges the gap between design theory and professional CAD for digital electronic systems p. 215

Implementation of computerized learning methods in secondary electronics education p. 221

Computer aided construction of questions for tests p. 229

Computer-mediated communication in the professional development of workers in the advanced learning technologies industry p. 239

Just in time open learning - for professionals p. 249

DEDICATED: architecture, infrastructure and examples of advanced learning technology p. 259

New media in technical education: the case for telecommunications p. 271
The European research and development programme DELTA in the Federal Republic of Germany

From decision support systems to computer supported cooperative work (The Evolution of Research and Educational Applications)

Establishing a technology based learning advisory service

The automated learning centre: a new educational service in India for professionals

Distance education and E-mail

Computer-mediated education - benefits, pitfalls, challenges

Learning theories, design and production methodology

Hypertext and Hypermedia as learning tools in science and technology

Table of Contents provided by Blackwell's Book Services and R.R. Bowker. Used with permission.
