Table of Contents

High Speed Interconnection of Workstations: Concepts, Problems and Experiences p. 3
High Performance Architecture Issues p. 23
Issues in Object-Oriented Distributed Systems p. 31
What is a Deadlock? p. 49
Distributed Algorithm for Resource Management p. 61
Getting Cooperative Environment by Coordinating Services through a Network p. 73
Distributed Consensus Protocol with a Coordinator p. 85
Using Global State Properties to Attain Mutual Exclusion in Distributed Systems p. 97
Programming Communicating Distributed Reactive Automata: the Weak Synchronous Paradigm p. 109
Parallel Implementations of two Algorithms for Solving Linear Programming Problems p. 121

Analysis of the Quality of Service in a MAN Environment p. 137
An Approximate Analysis of DQDB Networks with the Bandwith Balancing Mechanism p. 149
LAN Distributed Fault-Tolerance p. 161
A Statistical Study of the Factors that Affect the Performance of a Class of Parallel Programs on a MIMD Computer p. 175
A Multiprocessor Parallel Disk System Evaluation p. 187
A Decomposition Approximation Method for Closed Queueing Networks with Fork/Join Subnetworks p. 199
Modelling and Analysis of Deterministic Concurrent Systems with Bulk Services and Arrivals p. 213
A Performance Comparison between the Fieldbus Protocol Standards PROFIBUS and FIP p. 245

Analysis of a Class of Polling Protocols for Fieldbus Networks p. 259
A Theory to Increase the Effective Redundancy in Wormhole Networks p. 277
A Systematic Approach to Load Distribution Strategies for Distributed Systems p. 291
A Cooperative Algorithm for Load Balancing in Interconnected Transputer Network p. 305
Uniform Co-Scheduling Using Object-Oriented Design Techniques p. 317
Distributed Access to Persistent Objects p. 329
Distributed Simulation: a Simulation System for Discrete Event Systems p. 343
Towards the Distributed Implementation of Discrete Event Simulation Languages p. 355
Enhancing Structured Analysis by Timed Statecharts for Real-Time and Concurrency Specification p. 369
From Annotated LOTOS Specifications to Queueing Networks: Automating Performance Models Derivation p. 401
