Foreword: John S. Rinehart Awards: 1995

Preface

Dynamic loading of porous materials: potential and restrictions for novel materials applications  p. 3
The shock Hugoniot of aluminum nitride compacts  p. 15
The problem of obtaining dense and strong compacts in explosive loading of powders  p. 23

A new arrangement for dynamic compaction in the cylindrical configuration  p. 29
Effect of impurities on transient heat conduction in shock compaction of diamond powders  p. 37
Magnetic measurements on shock-consolidated [actual symbol not reproducible] bulk magnets under steady fields of up to 15 T  p. 45
Plasticity modeling of porous aluminum under plates impact  p. 51
Densification behavior of dynamically shock compacted alumina-zirconia powder  p. 59
In-situ underwater-shock consolidation of combustion synthesized titanium carbide  p. 67

Refractory alloy fabrication by a hot explosive compaction technique  p. 75
Explosively consolidated PVC-silica powder mixtures  p. 83
Compaction of ultradisperse diamonds by weak shock wave  p. 89
Fabrication of dispersion strengthened materials by shock consolidation  p. 93
Possibilities of obtaining combined samples from tungsten-based alloys by high-temperature shock wave treatment  p. 99
Explosive compaction of copper and graphite powder mixtures  p. 109
Hot shock consolidation of difficult-to-consolidate powders using a converging underwater shock wave  p. 117
The influence of preheating temperature on shock wave consolidation of diamond-containing powders  p. 125

Cold-welding model of dynamic consolidation of solids  p. 133
Explosive consolidation of nanometer Si[subscript 3]N[subscript 4] powder  p. 139
Understanding dynamic fracture phenomenology with fractography  p. 151
Visualization of fracture nucleation during impact in glass  p. 163
Ductile damage modeling based on void coalescence and percolation theories  p. 171
Large confinement high strain rate test apparatus for ceramics  p. 179
Cavity expansion analysis of brittle materials  p. 187
Dynamic failure of AD-99.5 alumina  p. 195
Fracture threshold and shock martensite formation in stainless steel  p. 203
Failure wave under shock compression in soda lime glass  p. [s.n.]
Dynamic fracture and shock recompaction on tantalum and uranium samples  p. 219
Ductile fracture during high rate forming of armco iron  p. 227
Dynamic deformation and fracture of high-purity titanium  p. 235
Hypervelocity impact phenomena  p. 245
Impact studies of rod projectiles against titanium and steel targets  p. 257
Metallurgical studies of deformation and failure patterns from targets impacted by long-rod penetrators  p. 265
Hypervelocity penetration in aluminum 6061 and 1100 alloys p. 273
Effects of shock-waves induced by ballistic impact on a woven glass fiber/epoxy composite p. 285
Microstructural evolution associated with hyper-velocity impact craters in OFHC copper p. 293
A preliminary study of the effect of target micro-structure on high-velocity impact cratering in thick copper plates p. 303
Microstructural evolution associated with hyper-velocity impact crater formation in metallic targets p. 313
Microstructural observations and comparison of impact craters in 6061-T6 aluminum targets p. 325
Axisymmetric penetration of RHA steel targets by cylindrical tubes p. 337
Modeling depth of penetration experiments using the Johnson-Holmquist model in CTH p. 345
Surface modification with high energy plasma pulses p. 353
The overview of experimental data having certified the fact of super-deep penetration effect p. 361
A new two stage light gas laucher p. 369
Macroscopic scaling and microstructural evolution in shear band phenomena p. 377
Micromechanism of shear localization in low-carbon steels p. 389
Collective behavior of shear bands p. 397
Shear band width in thermo-viscoplastic heat-conducting materials p. 405
On the critical impact velocity in plastic shearing p. 413
Dynamic recrystallization in adiabatic shear bands in shock-loaded copper p. 421
Tensile split Hopkinson bar testing of different armco iron stocks p. 429
An overview of experimental results concerned with super-deep penetration effect p. 437
Dynamic recrystallization in shear bands p. 443
Stress-wave induced martensitic phase transformations p. 451
Ductile behavior of some materials in the shaped charge jet p. 463
A scheme of explosive shaping of self-forming fragments p. 471
Direct experimental evidence of melting a shear band in a molybdenum shaped charge slug p. 479
High-strain, high-strain-rate deformation of tantalum: the thick-walled cylinder method p. 487
High-strain-rate behavior of pure tantalum in explosively formed penetrator and shaped charge regimes p. 495
Evidence of melt in "soft" recovered copper jets p. 503
Modeling and simulation of interaction process of shaped charge jet and explosive reactive armour p. 511
Modeling and simulation of shock-wave and high-rate phenomena p. 521
Behavior of a pure alumina submitted to a divergent spherical stress wave p. 535
Penetration of steel plates by long ceramic rods p. 543
Today's numerical micromodels helping to predict metallurgical dynamics phenomena in granular media p. 551
Comparing penetration efficiencies of long penetrators in axial and planar symmetries p. 559
New mechanism of high velocity mass transfer at micro level
Modelling of shock compression of solid and porous ceramics
Numerical study of unlimited cumulation in the case of planar detonation waves interaction in a heterogeneous medium
Analysis of constitutive model requirements for the hydrocode simulation of elastic precursor decay in remko aq85 iron
Mass mixing and nucleation and growth of chemical reactions in shock compression of powder mixtures
Phase transformation of turbostratic B-N-C by shock compression
Shock-induced chemical reactions in Ti-Al powder mixtures
Shock-induced reaction behavior of Ti-Si and Ti-B powder mixtures
Synthesis of TiC ceramics by shock-assisted reaction sintering
Shock reactive mechanism for direct synthesis of titanium aluminides from element powder mixture
Geometric effect on shock reactive synthesis of titanium aluminides
Reactions in neat porous metal/metal and metal/metal oxide mixtures under shear induced plastic flow conditions
The regimes of diamond formation under detonation
Shock-wave loading influence on chemical reactions running in hematite using cumulative systems
Investigation of structural changes in amorphous metal alloys under shock-wave loading
Quasi-elastic behavior of tantalum, vanadium and copper at high dynamic pressure
Evaluation of the elastic response to impact for high-strength steels
Shock-induced chemical reactions in metal-silicon systems
Shock induced synthesis of silicides
Chemical reaction in Ti-Si mixture under controlled high-strain-rate plastic deformation
Dynamic properties and microstructural behavior of shock-loaded Armco iron at high temperatures
Shock-induced changes in HgO powder
Net-shape manufacturing of metal/superconducting ceramic/metal rods by explosive compaction and warm extrusion
High-strain-rate behavior of tungsten-based composites
Phase transformations and structure evaluation of zirconium loaded by spherical converging shock waves
Explosive loadings of the metastable structure of zirconia
About nucleation of martensite in shock waves
Electromagnetic methods for investigation of chemical and phase transformations in solids in a shock wave
Hardening of nitrogen alloyed steels by shock waves
Oblique shock loading of copper rods with different grain sizes
Intergranular deformational mechanisms during dynamic consolidation
The artificial intelligence in the design of the metal explosive welding technology
Explosive welding of an amorphous film to a steel plate using a regulated underwater shock wave

Energy balance and mechanical effect of underwater contact explosion

Large plastic shear deformation of thin steel plates at impulsive blast loading

Unusual response of materials with microspores under high rate loading at the atomic level

Influence of the relative rigidity on the failure of pipe systems subject to explosive loads

Fine structure of powder material flow in the region of shock wave branching

Application of faceted yield surfaces for simulating compression tests of textured materials

Influence of strain rate on the mechanical properties in a magnesium-base composite

High rate testing of kinetic energy penetrator materials

Deformation and strain hardening of ordered and disordered single crystals of Cu[superscript 3]Au at high strain rate

High strain rate behavior of Ti6Al4V

Commercial production of bimetal bearings by explosive welding in Russia
